NFV Release 4 Definition
Foreword

The adoption by the ETSI ISG NFV of specific Features follows the ISG working procedures, in particular, with the formal approval of an ISG Work Item.

The NFV Release 4 Definition will be updated according to the Work Items and deliverables that are approved by the ETSI ISG NFV.

NFV Release 4 deliverables are a subset of the whole ETSI ISG NFV’s work programme. In addition to the release dependent specifications, the ETSI ISG NFV several other reports and guidelines. All NFV deliverables are available at ETSI’s “Search and Browse Standards” tool [1].

NOTE: In case of discrepancies between the contents of the present document and the ETSI NFV Group Specifications/Reports, the latter source of information takes precedence.

1 Scope

The purpose of the Release Definition is to identify the informative and normative work that ETSI ISG NFV plans to develop as part of Release 4.

Stage 1 and 2 development of Release 4 features is expected to finalize in 2021.

The present document describes the specification objectives of Release 4 and lists the features which are part of the Release.

2 References

For the purposes of the present document, the following references apply:

3  Definitions and abbreviations

3.1  Definitions

For the purposes of the present document, the terms and definitions in [2], and the following apply:

**Capability:** ability of an item to perform an action under given internal conditions in order to meet some demand

**Feature:** functionality which represents added value to the system for a defined set of users

**Function:** the abstract concept of a particular piece of functionality in a device, entity or service

**Functionality:** sum of actions or any aspect an item can do

**Release:** a set of deliverables that specify a well-defined, stable and internally consistent set of functions

**Release Definition:** the ensemble of Features of a particular Release

**Release Description:** the description of specification outputs delivered by the Release

3.2  Abbreviations

For the purposes of the present document, the abbreviations in [2], and the following abbreviations apply:

<table>
<thead>

4  Release overview

4.1  Introduction

ETSI ISG NFV Release 4 (hereinafter referred also as Release 4 or the present Release) builds on top and leverages the results of ETS ISG NFV documents published as part of the Release 3. The Release 4 introduces new features on top of the specified capabilities and features in previous Releases.

A high-level description for each of the features comprising the current Release 4 work is provided in clause 5. Clause 4.2 provides a statistical summary of the Release 4 in terms of number of specifications and reports published to date. Clause 4.3 summarizes the capabilities and features that have been specified in past Releases and clause 4.4 introduces the main technical areas to be covered in Release 4. Clause 6 lists the published GR and GS comprising Release 4, while clause 7 lists the ongoing work items.

4.2  Overview

At the time the present Definition document version is delivered (February 2020), the Release 4 is comprised of the following number of published deliverables:
4.3 Summary of past Releases

The Release 3 was built upon the capabilities and features specified as part of the NFV Release 2. The Release 2 specified requirements, information models, data models and interface protocols to enable interoperable implementations of the NFV Architectural Framework [3]. The Release 3 added the following major architectural changes:

- Addition of the Or-Or reference point in between two NFVO (Feature "NFV-MANO admin domains").
- Exposure by the NFV-MANO functional blocks of new interfaces for policy management (feature "Policy management framework").
- Exposure by the NFV-MANO functional blocks of new interfaces for the management of NFV-MANO functional blocks (feature "Management of NFV-MANO").
- Definition of the Wide Area Infrastructure Management (WIM) and exposure of interfaces for multi-site network connectivity management (feature "Management and connectivity of multi-site services").

The Release 2 Description [4] provides details about the capabilities that had been specified in the Release 2. The Release 3 Description [5] deals the new features that had been specified in the Release 3.

4.4 Release 4 technical areas

The ETSI NFV Release 4 aims to specify around the following technical areas.

A) NFVI evolution, focusing on:

   A.1) Enhancements to support lightweight virtualization technologies,
   A.2) Optimizing NFVI abstraction for reducing the coupling of VNFs to infrastructure, and
   A.3) Optimizing networking integration into the infrastructure fabric and ease the connectivity for VNFs and NS.

B) Enhancing NFV automation and capabilities, focusing on:

   B.1) Improving life-cycle management and orchestration,
   B.2) Simplification of VNF and NS management aspects leveraging virtualization, and
   B.3) Handling advances in autonomous networking.

C) Evolving the NFV-MANO framework, focusing on:

   C.1) Optimizing internal NFV-MANO capabilities exposure and usage.

D) Operationalization, focusing on:

   D.1) Simplification of NFV to ease development and deployment of sustainable NFV based solutions,
   D.2) Verification (and certification) procedures and mechanisms, and
   D.3) Operationalization, integration and use of NFV with other management and network frameworks.
In addition to the above technical areas, additional aspects about security hardening of NFV (enhancements), and other specific technical enhancements are necessary to maximize the impact of virtualization and future NFV deployments.

Within the areas of work that are introduced above, the following more specific top-level (“umbrella”) features are derived as described in the following clauses.

## 5 Release 4 features

### 5.1 Overview

The candidate new features introduced as part of the Release 4 are listed in Table 5.1-1.

### 5.2 Features carried over from Release 3

#### 5.2.1 Overview

This clause introduces areas of work that were not completed in Release 3 timeframe and are included in Release 4. Minor adaptations on the scope from Release 3 may be done as part of the Release definition.

References to feature identifiers (e.g., FEAT01) are provided referring the Annex B of the NFV Release 3 Definition document.

#### 5.2.2 NFV-MANO upgrades (SWUP-MANO, FEAT01)

The feature was started in Release 3 as FEAT01.

The scope of the feature covers the following areas:

- Update and upgrade of NFV-MANO software components in an NFV context (or environment).
- Identification of use cases for update and upgrade of NFV-MANO.

NOTE: This work has been started as DGR/NFV-REL011.

- Identification of the required set of update/upgrade controlling functions to facilitate software updates/upgrade.
- Specification of requirements for software update/upgrade controlling functions.

The "technical areas" covered by this feature are: C.1), D.2) and D.3).
5.2.3  MEC in NFV (MECinNFV, FEAT12)

The feature was started in Release 3 as FEAT12.

The scope of the remaining work of the feature covers the following areas:

- Enhancement support for multi-access edge computing (MEC) in NFV deployments
- Support coordination of NFV-MANO with consumers (in particular MEC) for graceful termination / stop support
- Enhancements on the placement and network constraints during resource allocation for network service and VNF instances

The "technical areas" covered by this feature are: B.2), B.3), D.1) and D.3).

5.2.4  Licensing management (LIC, FEAT13)

The feature was started in Release 3 as FEAT13, based on ETSI GR NFV-EVE 010. Further work is ongoing as DGR/NFV-IFA034.

The scope of the feature covers the following areas:

- NFV license management framework aspects to ensure Service Providers can deploy VNFs quickly without customizing the licensing mechanisms for each VNF and each VNF Provider.

The feature specification work scope encompasses:

- Develop use cases related to license management.
- Derive requirements from license management use cases.
- Identify what NFV Architectural Framework support and enhancements are needed to cover license management requirements.

The "technical areas" covered by this feature are: B.1), B.3), D.1) and D.3).

5.2.5  Cloud-native VNFs and Container Infrastructure management (CNNFV, FEAT17)

The feature was started in Release 3 as FEAT17, based on ETSI GS NFV-EVE 011 and ETSI GR NFV-IFA 029.

The scope of the feature covers the following areas:

- NFV Architecture support for VNFs which follow “cloud-native” design principles.
- Enhance NFV-MANO capabilities to support container technologies based on ETSI GR NFV-IFA 029.
- Enhance NFV-MANO capabilities for container management and orchestration
- Enhance information model for containerized VNFs both using bare metal or nested virtualization technologies

NOTE: Normative work has been started as DGS/NFV-IFA036, DGS/NFV-IFA040. Security related work has been started as DGS/NFV-SEC023.

The "technical areas" covered by this feature are: A.1), A.2), B.2) and C.1).

5.2.6  Security management (SECMM, FEAT18)

The feature was started in Release 3 as FEAT18.

The scope of the feature covers the following areas:

- Security management and monitoring for NFV for planning, enforcement and monitoring targeting at holistic security policies and functions.
- Enhancements to current NFV Architectural for NFV Security Management.
- Secure sensitive components in the NFV framework.
- Secure hosts on which sensitive components will be hosted.
- Secure the broader context in which sensitive components will be hosted.
- Physical, logical and operational measures related to securing sensitive components.
- Provisioning and de-provisioning sensitive components.
- Specification of requirements for sensitive components.

NOTE: Work has been started as DGS/NFV-SEC024, and DGS/NFV-IFA033.

The "technical areas" covered by this feature are: C.1) and D.3).

5.3 New features

5.3.1 Network connectivity integration and operationalization for NFV (NFV-Connect, FEAT19)

The scope of the feature covers the following areas:
- The integration of NFV/SDN for overlay virtual networking in the context of dynamic, multi-site and more granular network function services.
- Exposure of high-performance overlay network capabilities to network functions.
- Simplification of network connectivity exposed and offered to the VNF. Support of dynamic routing capabilities in the network.
- Enabling more dynamic network provisioning and reconfiguration “end-to-end”, within and across sites.

NOTE: This work has been started as DGR/NFV-IFA035. Additional informative work has been started as DGR/NFV-IFA038.

The "technical areas" covered by this feature are: A.2), and A.3).

5.3.2 NFV-MANO automation and autonomous networks (Auto, FEAT20)

The scope of the feature covers the following areas:
- NFV-MANO support for managing autonomous networks.
- Enabling higher level of automation for NFV-MANO.
- Intent-based principles for external exposure network services management.

NOTE: This work has been started as DGR/NFV-IFA041.

The "technical areas" covered by this feature are: B.1), B.3), and C.1).

5.3.3 NFV enhancements for 5G (5GNFV, FEAT21)

The scope of the feature covers the following areas:
- NFV support for deploying 5G networks, capabilities and associated requirements.
- 5G network capabilities and features interworking and relationship with NFV.
- Determine and profile how NFV can support 5G deployments.

NOTE: This work has been started as DGR/NFV-IFA037.
The "technical areas" covered by this feature are: A.1) and D.3).

5.3.4 Multi-tenancy enhancements for NFV-MANO (M-Tenant, FEAT22)

The scope of the feature covers the following areas:
- Multi-tenancy technology to share IT resources securely among multiple tenants that use the cloud.
- Virtualization-based features as a means to isolate tenants.
- Association/disassociation of tenancy and NFV-MANO objects.

NOTE: This work has been started as DGR/NFV-EVE018.

The "technical areas" covered by this feature are: B.1), and C.1).

5.3.5 SBA for NFV-MANO (MANO-SBA, FEAT23)

The scope of the feature covers the following areas:
- Service exposure to 3rd party access for selected NFV-MANO services.
- Assess steps in the SBA transformation (different steps have different levels of complexity), such as NFV-MANO service independence, modularization, data separation/split, exposure, dynamic registration and discovery of services.
- Optimal routing of service requests to NFV-MANO service instances, including load balancing and failover management
- Enabling new interface consumers (e.g., policy engines, license managers, AI-based systems, etc.).

NOTE: This work has been started as DGR/NFV-IFA039.

The "technical areas" covered by this feature are: B.1) and C.1).

5.3.6 VNF generic management functions (VNF-OAM, FEAT24)

The scope of the feature covers the following areas:
- Definition of a set of common management functions for VNFs to ease their provisioning, connectivity, configuration and monitoring on a virtualized platform.
- Reducing dependencies of the VNF from underlying resources, hosts and network, thus realizing a full network function decoupling from the infrastructure.
- VNFs reusing generic and common management functionality provided as virtualization platform functionalities.
- Leveraging PaaS capabilities as a means for providing common management functions.

NOTE: This work has been started as DGR/NFV-EVE019.

The "technical areas" covered by this feature are: A.2), B.2) and D.1).

5.3.7 Continuous VNF integration (VNF-CI, FEAT25)

The scope of the feature covers the following areas:
- Optimization of the VNF Package structure and VNF.
- Test execution of test functions and feedback to VNF provider/developer.
- VNF/VNFC software component update/upgrade supporting continuous development and integration paradigms.

The "technical areas" covered by this feature are: A.2), D.1), and D.2).
5.4 Enhancement features

5.4.1 Introduction

This clause introduces areas of work in which specific technical and security enhancements are expected to be specified.

5.4.2 NFV security hardening (enhancements) (ENH01)

The scope of the feature covers different technical working areas to enhance the ETSI NFV specifications and the already specified past Releases features/capabilities with the required security levels.

NOTE: The list of possible security enhancements is not determined in the present Release definition. Updates and tracking of this type of enhancements are available on the feature tracking wiki pages [6].

5.4.3 Specific technical enhancements (ENH02)

The scope of the feature covers different technical working areas to enhance the ETSI NFV specifications and the already specified past Releases features/capabilities with specific technical enhancements which are considered of low complexity and not addressed already by other Release 4 features.

NOTE: The list of possible technical enhancements is not determined in the present Release definition. Updates and tracking of this type of enhancements are available on the feature tracking wiki pages [7].

6 NFV Release 4 published deliverables

6.1 Introduction

The present clause 6 lists the published deliverables (Group Specifications and Group Reports) associated to the Release 4. The NFV Release 4 is comprised of multiple specification and reports, which can be categorized according to different specification stages (stage 1, stage 2, etc.) and compliance (normative or informative).

NOTE 1: The versions among the different deliverables may differ, e.g., a deliverable may have been updated and published with a newer version due to maintenance, whereas some other deliverable not. The latest available published version of each deliverable is indicated in the following tables.

NOTE 2: The present clause 6 only lists GS and GR that contain the specification of features listed in clause 5.

6.2 Stage 1 and stage 2 Group Specifications

6.2.1 Newly published Group Specifications

None currently published.

6.2.2 Evolved/propagated published deliverables from a previous Release

None currently published.

6.3 Stage 3 Group Specifications

6.3.1 Newly published Group Specifications

None currently published.
6.3.2 Evolved/propagated published deliverables from a previous Release

None currently published.

6.4 Other Group Specifications

6.4.1 Security specifications

None currently published.

6.4.2 Testing specifications

None currently published.

6.5 Newly published Group Reports

None currently published.

7 NFV Release 4 active Work Items of unpublished deliverables

7.1 Introduction

The present clause 7 lists the active Work Items associated to the Release 4.

Clause 7.2 lists the Work Items that will produce new specifications and reports (i.e., complete new deliverables).

Clause 7.3 lists the Work Items that will produce a new version of a specification or report that has been published in a previous Release and which is evolved/propagated in order to document the needed Release 4 features.

7.2 Work Items producing new specifications or reports

The current Work Items associated to the Release 4 and that will produce new specification or reports are listed in Table 7.2-1.

NOTE: For tracking purposes, Work Items listed in Table 7.2-1 include both informative and normative work. The final list of Release-dependent deliverables will be listed within the Release Description upon publication of the deliverables.
Table 7.2-1: NFV Release 4 Work Items producing new specification or reports.
