Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: “Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards”, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Group Specification (GS) has been produced by ETSI Industry Specification Group (ISG) Network Functions Virtualisation (NFV).

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.
1 Scope

The present document provides requirements for the structure and format of a VNF Package to describe the VNF properties and associated resource requirements in an interoperable template.

The focus is on VNF packaging, meta-model descriptors (e.g. VNFD) and package integrity and security considerations.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at https://docbox.etsi.org/Reference.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

[1] ETSI GS NFV 003: "Network Functions Virtualisation (NFV); Terminology for main concepts in NFV".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] ETSI GS NFV-IFA 002: "Network Functions Virtualisation (NFV); Acceleration Technologies; VNF Interfaces Specification".

[i.2] ETSI GS NFV-IFA 006: "Network Functions Virtualisation (NFV); Management and Orchestration; Vi-Vnfm reference point - Interface and Information Model Specification".

[i.3] ETSI GS NFV-IFA 007: "Network Functions Virtualisation (NFV); Management and Orchestration; Or-Vnfm reference point - Interface and Information Model Specification".

[i.4] ETSI GS NFV-IFA 008: "Network Functions Virtualisation (NFV); Management and Orchestration; Ve-Vnfm reference point - Interface and Information Model Specification".

[i.5] ISO/IEC 9646-7: "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 7: Implementation Conformance Statements".

[i.6] ISO/IEC 9899: "Information Technology -- Programming languages -- C".
3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in ETSI GS NFV 003 [1] apply.

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in ETSI GS NFV 003 [1] and the following apply:

- ARM: Advanced RISC Machine
- CDN: Content Delivery Network
- CP: Connection Point
- CPD: Connection Point Descriptor
- CPU: Central Processing Unit
- DF: Deployment Flavour
- DSL: Domain Specific Language
- EM: Element Manager
- GS: Group Specification
- IFA: Infrastructure and Architecture Working Group
- IP: Internet Protocol
- ISG: Industry Specification Group
- LAN: Local Area Network
- LCM: Life Cycle Management
- MAC: Media Access Control
- MPLS: Multiprotocol Label Switching
- NFV: Network Functions Virtualisation
- NFVI: Network Functions Virtualisation Infrastructure
- NFVO: Network Functions Virtualisation Orchestrator
- NS: Network Service
- PM: Performance Management
- QA: Quality Assurance
- QoS: Quality of Service
- RAM: Random Access Memory
- RDMA: Remote Direct Memory Access
- SAL: Service Availability Level
- SW: Software
- UML: Unified Modelling Language
- URL: Uniform Resource Locator
- VDU: Virtual Deployment Unit
- VIM: Virtualised Infrastructure Manager
- VL: Virtual Link
- VLD: Virtual Link Descriptor
- VM: Virtual Machine
- VNF: Virtualised Network Function
- VNFC: Virtualised Network Function Component
- VNFD: Virtualised Network Function Descriptor
- VNFM: Virtualised Network Function Manager
4 General description

4.1 Introduction

The present document develops specifications for packaging of VNFs to be delivered to service providers, focusing on the holistic end-to-end view of the VNF Package lifecycle, from design to runtime, capturing development as well as operational views. The present document provides an analysis of end-to-end VNF Package lifecycle management operations based on use-cases and NFV Architectural Framework functional blocks.

A VNF Package contains all of the required files and meta-data descriptors required to validate and instantiate a VNF.

Standardized meta-data descriptors are required to:

- describe the NFV infrastructure resource requirements for a VNF in a service provider environment;
- describe design constraints and other dependencies in order for the VNF to successfully install, instantiate and terminate; and
- describe VNF operational behaviour including VNF lifecycle events (e.g. scaling, upgrading).

Standardized packaging and validation of VNFs is required to:

- provide a consistent, documented method for VNF providers to package VNFs;
- harmonize the service provider on-boarding process for VNFs coming from different VNF providers;
- ensure integrity, trust and auditability of a VNF Package;
- allow for a flexible and extensible VNF packaging structure that accommodates a wide variety of NFV infrastructure scenarios; and
- allow the packaged VNF-related meta-data to be interpreted and the packaged VNF to be instantiated in a wide variety of orchestration systems irrespective of technology choice or infrastructure environment.

4.2 Objectives

The present document delivers:

- A description of a set of use cases involving the handling of VNF Packages.
- A set of functional requirements to be fulfilled when packaging a VNF.
- A specification of the information elements and attributes applicable to the VNFD.

4.3 Conventions

The attributes of the VNFD and associated information elements are described in the tables provided in clause 7. Each table has 5 columns, with the following significance:

- The "Attribute" column provides the attribute name.
- The "Qualifier" column indicates whether the support of the attribute is mandatory, optional or conditional.
- The "Cardinality" column contains the minimum and maximum cardinality of this information element (e.g. 1, 2, 0..N, 1..N). A cardinality range starting with 0 indicates that the attribute need not always be included.
- The "Content" column provides information on the type of the attribute values. It can be the name of an Information Element, a primitive type (Identifier, DateTime, etc.) or a generic UML type (String, Integer, etc.). If a cell in the "Content" column is marked as "Not specified", this means that the specification of the type is left to the data model design stage.
The "Description column" provides a brief explanatory description and additional constraints.

The following notations, defined in ISO/IEC 9646-7 [i.5], are used for the qualifier column:

- **M** mandatory - the attribute shall be supported.
- **O** optional - the attribute may, but need not to, be supported.
- **CM** conditional mandatory - the attribute shall be supported under certain conditions. If the specified conditions are met then the attribute shall be supported. These conditions are specified in the Description column.
- **CO** conditional optional - the attribute may, but need not to, be supported under certain conditions. These conditions are specified in the Description column.

A Mandatory qualifier would imply that NFVO/VNFM shall understand/parse the particular element but the presence (inclusion in an occurrence of a VNFD) of the element is dictated by Cardinality. The lower bound of "1.." cardinality would imply that the attribute shall be present in the VNFD.

The following notations are used for the content column of information elements, input parameters, notifications, etc.:

- Parameters are of type "Identifier" when referring to an identifier of an actual object.
- For a "true" identifier identifying an object (information element or structure) the content type "Identifier" and the description "Identifier of this <object_name> <notification/information element/...>" is used.
  
  Example: Identifier "resourceId" of the "NetworkSubnet information element" shall have the description "Identifier of this NetworkSubnet information element".

- Object(s) are referenced by their identifier using the syntax "Identifier (Reference to <object_name1> [,<object_name2>...], or <object_nameN>)".

- Names for attributes and parameters of type Identifier shall be of the following pattern: <name>Id.

### 4.4 Levels of NFV Entities

For NFV management, there are four levels of entities, i.e.:

- **Descriptors** - general type definitions for entities such as VNFs and VLs, e.g. VNFD and VLD.
- **Descriptor objects** - an instance of a descriptor, e.g. an instance of a VNFD (not an instance of a VNF instantiated according to this VNFD):
  
  - A descriptor object may provide (among other things) value ranges and default values for the attributes in the associated NFV entity class.

  - In the present document, the creation of subclasses of generic descriptors (e.g. VNFD_x as a subclass of VNFD) has been avoided, since this approach would create a proliferation of descriptor classes.

- **NFV Entity Classes** - these are classes that represent various NFV entities such as VNF and VL. There is one-to-one mapping between a descriptor object and an NFV entity class. An example of an NFV Entity Class is CDN Cache VNF.

- **NFV Entity Instances** - these are instances of a given NFV entity class. An NFV entity instance is used to represent the current state and attribute values for a given NFV entity. Each NFV entity instance is bound by the associated descriptor object, e.g. value ranges and default values for attributes. An example of an NFV Entity Instance is a CDN Cache VNF instance.

Each level puts constraints on the subsequent levels.

Information in a lower level does not appear in a higher level, e.g. NFV entity instance information does not appear in the associated NFV entity class, descriptor object or descriptor.
For example:

- A VNFD has parameters such as virtualisationDeploymentUnit, intVirtualLinkDesc, extConnectionPointDesc and deploymentFlavour. These same parameters apply to every type of VNF.

- For a given type of VNF (e.g. a firewall), one would create an instance of the VNFD and populate the various VNFD parameters with values specific to the given type of firewall: specific VDU instances describing the resource requirements for this VNFD instance, VLD instances describing the various types of VL needed, specific deployment flavour (DF), etc.

- Next, one defines the class for the given VNF firewall. The class includes the attributes that are seen across the given reference point.

- Finally, one can instantiate one or more VNF firewall by populating the various attributes in the VNF class with actual values.

## 5 VNF Packaging use-cases (informative)

### 5.1 General

The following use cases describe the steps involving the VNF Package as it transitions from the VNF Provider to the Service Provider. They capture the generic processes as well as the actions required to be performed by actors playing different roles in order to identify the requirements for the standard packaging format.

All the use cases presented in this clause are informative.

For the purpose of the use cases, the roles identified in table 5.1-1 have been identified.

<tr>
<td>Service Designer</td>
</tr>
<tr>
<td>Service Acceptance Specialist</td>
</tr>
<tr>
<td>Service Deployment Manager</td>
</tr>
</tbody>
</table>

### 5.2 VNF Package bundling for distribution

A VNF is, from a delivery point of view a software application so most of the general principles and processes associated with the software development lifecycle apply. After a VNF provider completes the development and functional testing for the VNF it needs to bundle all the necessary binaries and corresponding metadata for distribution to potential customers.

<td>Bundle the release, sign the package and place it in a distribution repository.</td>
</tr>
</tbody>
</table>

5.3 VNF Package testing

The VNF Package testing encompasses steps to guarantee that the package adheres to the standard structure and contains the mandatory metadata required in order to be considered compliant with the industry format.

### 5.5 VNF Package validation and certification

A VNF Package is composed of several components like e.g. VNFD, software images, scripts, etc. During the on-boarding of the VNF Package, a validation of the package is performed. The validation is a procedure that verifies the integrity of the VNF Package.

A package is certified by performing acceptance testing and full functional testing against the VNF including configuration, management and service assurance.

</tr>
</tbody>
</table>
5.7 Keeping NFV management and orchestration in sync about a VNF application software modification

For currently deployed VNFs on-boarding of new versions will need the ability to keep track of multi version, multi environment multi instance and allow the service provider team to perform updates/upgrades with clear expectations of service continuity based on metadata information including component dependencies.

The use case below focuses on updating the information about a VNF instance stored in NFV management and orchestration as a result of a VNF application software modification performed through service provider's management system, wherein such a process only comprises modifying the VNF's application software without requiring a change of the VNF's underlying virtualised resources or internal VNF component (VNFC) topology/composition (see figure 5.7-1). Examples of VNF application software modification are: update, upgrade, and downgrade. Such modification may be performed without requiring the termination of the VNF instance with the prior VNF application software version. Consequently, the relevant VNF Package is replaced by a different VNF Package which includes the VNF application software used in the modification.

</tbody>
</table>
5.8 VNF configurable parameter provisioning

The VNFD is a static description file, not a dynamic configuration file. The metadata description in the VNFD is not changed during the whole VNF lifecycle. Some VNF parameters described in the VNFD can be declared to be configurable during the VNF design phase, and further be configured by the VNFM during or after VNF instantiation. This use case provides a scenario where the VNF configurable parameters described in the VNFD are provisioned.

Roles

<table>
<thead>
<tr>
<th>#</th>
<th>Role</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Service Acceptance Specialist, Service Deployment Manager</td>
</tr>
</tbody>
</table>

<th>Role</th>
<th>Action/Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Service Acceptance Specialist</td>
<td>The NFVO on-boards the VNF Package and stores the VNFD.</td>
</tr>
<tr>
<td>2</td>
<td>Service Deployment Manager</td>
<td>The VNFM accesses to the VNFD, reads the description of each VNF parameter and determines whether it is configurable. See note 1.</td>
</tr>
<tr>
<td>3</td>
<td>Service Deployment Manager</td>
<td>For each configurable VNF parameter in the VNFD, based on the interaction with the NFVO, the VNFM configures the value of VNF parameter during VNF instantiation (i.e. when the VNF is deployed). See note 2.</td>
</tr>
</tbody>
</table>

NOTE 1: VNF configurable parameters in the VNFD (e.g. the IP address of element manager for the VNF) belong to virtualisation-related configuration parameters of the VNF as specified in ETSI GS NFV-IFA 008 [i.4].

NOTE 2: This configuration step is a part of VNF instantiation instead of VNF update.
6 Functional requirements for VNF Packaging

6.1 Generic Functional Requirements

Table 6.1-1 specifies generic functional requirements applicable to VNF Packaging.

<table>
<thead>
<tr>
<th>Req Number</th>
<th>Requirement Description</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>VNF_PACK.GEN.001</td>
<td>The VNF Package contents, including the VNF descriptor, VNF Binaries, configuration, scripts and software images, as well as manifest file, checksum, etc. as appropriate constitutes a single delivery unit from a distribution perspective. Any changes to the constituency of this unit shall be considered as a change to the whole and therefore shall be versioned, tracked and inventoried as one.</td>
<td></td>
</tr>
</tbody>
</table>

6.2 Functional requirements for VNF Packaging specification

6.2.1 Requirements for the structure of a VNF Package

<td>The VNF Package should contain other license terms information corresponding with all the components included in the package if different than the one of the VNF.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.DESC.003</td>
<td>The VNF Package should contain a Change Log. Change log captures the changes from one version to another including but not limited to features added/removed, issues fixed as well as known issues not resolved.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.DESC.004</td>
<td>VNF Package shall contain or reference one or more software images.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.DESC.005</td>
<td>The VNF Package may contain at most one software image per VNFC.</td>
<td>In case different virtualisation environments require different SW images of a VNFC they will be delivered in separate VNF Packages.</td>
</tr>
<tr>
<td>VNF_PACK.DESC.006</td>
<td>The VNF Package shall provide a mechanism to describe the package and its contents including, not limited to, version of the package, provider of the package and identification of the included metadata/artefacts.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.DESC.007</td>
<td>The VNF Package shall contain VNFD metadata.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.DESC.008</td>
<td>VNFD metadata shall not be modified once the package is assembled.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.DESC.009</td>
<td>VNFD metadata shall be placed in a well-known location within the VNF Package in order for the compliant parsers to find and extract.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.DESC.010</td>
<td>The VNF package shall enable including information supporting VNF testing.</td>
<td>This information may include test scripts and/or dependencies on an external test system.</td>
</tr>
<tr>
<td>VNF_PACK.DESC.011</td>
<td>The VNF Package shall allow to store in the package sets of related artefacts for use by functional blocks beyond NFV-MANO, and to assign a globally unique identifier to each set in an SDO-independent and vendor-independent manner.</td>
<td></td>
</tr>
</tbody>
</table>

6.2.3 Requirements for VNF Identification

Proper VNF Identification is required across the VNF lifecycle from development to retirement/decommission.

Table 6.2.3-1 specifies requirements applicable to the VNF identification.

<table>
<thead>
<tr>
<th>Req Number</th>
<th>Requirement Description</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>VNF_PACK.ID.001</td>
<td>There shall be a way to identify the version of the VNF Package Specification associated with a particular VNF.</td>
<td>This should guarantee compliance with the present document and allow systems parsing the metadata in the template to associate data elements with schema definition for compatibility reasons.</td>
</tr>
</tbody>
</table>
VNF Packet Identification Metadata shall contain:
- VNF Provider.
- VNF Product name.
- VNF Release Date/Time.
- VNF Package Version (version of the VNF release).

This is similar to current asset management practices for physical equipment by Make, Model and version.

VNF Pack ID 004 VNF Product Name and VNF Provider shall not be changed throughout the lifespan of the VNF. This is to aid with correlation between different versions of a VNF with the same code base.

VNF lifespan is defined and set by the VNF Provider on a case by case basis considering the product management, portfolio roadmap or any other commercially related factors.

<table>
<thead>
<tr>
<th>Req Number</th>
<th>Requirement Description</th>
<th>Comments</th>
</tr>

</thead>
<tbody>
<tr>
<td>VNF_PACK.LCMDSL.008</td>
<td>The DSL shall enable expressing actions leading to setting, incrementing and decreasing internal variables.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.LCMDSL.009</td>
<td>The DSL shall enable expressing actions leading to:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. invoke an operation of the Software Image Management interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. invoke an operation of the Virtualised Resources Information Management interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>3. invoke an operation of the Virtualised Resource Change Notification interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>4. invoke an operation of the Virtualised Resources Reservation Management interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>5. invoke an operation of the Virtualised Resources Performance Management interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>6. invoke an operation of the Virtualised Resources Fault Management interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>7. invoke an operation of the Virtualised Resources Change Notification interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>and 8. invoke an operation of the Virtualised Resources Reservation Management interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>9. invoke an operation of the Virtualised Resources Performance Management interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>10. invoke an operation of the Virtualised Resources Fault Management interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>11. invoke an operation of the VNF Configuration interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>12. invoke an operation of the VNF Indicator interface;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>13. invoke an operation of the VNF Lifecycle Operation Granting interface.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.LCMDSL.010</td>
<td>The DSL shall enable mapping LCM script variables on to:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. parameters of the VNFD;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. parameters of operation requests and results.</td>
<td></td>
</tr>
<tr>
<td>VNF_PACK.LCMDSL.011</td>
<td>The DSL shall enable a LCM script to access arbitrary artefacts in the VNF Package.</td>
<td></td>
</tr>
</tbody>
</table>

NOTE 1: The DSL does not provide means to specify where to send the operation request. The VNFM script execution environment will determine where to send the operation request based on local policies and/or information received from the NFVO.

NOTE 2: Operations that can be invoked correspond to operations specified in ETSI GS NFV-IFA 006 [i.2], ETSI GS NFV-IFA 007 [i.3], and ETSI GS NFV-IFA 008 [i.4], where the VNFM acts as request consumer.

EXAMPLE: Assuming the case that virtualised container instances have an attribute “name” and there are two instances named “boba” and “bobb”, while listing virtualised container instances information, usage of the regular expression “bob.” would request the producer to return information from instances named “boba” and “bobb”.

7 Virtualised Network Function information elements

7.1 VNF Descriptor (VNFD)

7.1.1 Introduction

The clauses below define the information elements related to the VNFD. A UML representation of the VNFD high-level structure is shown in figure 7.1.1-1.
7.1.2 VNFD information element

7.1.2.1 Description

A VNFD is a deployment template which describes a VNF in terms of deployment and operational behaviour requirements. It also contains connectivity, interface and virtualised resource requirements.

7.1.2.2 Attributes

The attributes of the VNFD information element shall follow the indications provided in table 7.1.2.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>

</tr>
</tbody>
</table>

**NOTE 1:** The VNFD Identifier shall be used as the unique identifier of the VNF Package that contains this VNFD. Any modification of the content of the VNFD or the VNF Package shall result in a new VNFD Identifier.

**NOTE 2:** Monitoring parameters are specified as part of VNF flavour, VDU and VL descriptions.

**NOTE 3:** The rule (conditions and actions) can be expressed as a script.

**NOTE 4:** This allows to provide one or more localization languages to support selecting a specific localization language at VNF instantiation time.

**NOTE 5:** This shall be used to describe both the software image loaded on the virtualisation container used to realize a VDU and the software images to be stored on VirtualStorage resources (e.g. volumes) attached to a virtualisation container.
7.1.3 Information elements related to VnfExtCpd

7.1.3.1 Introduction

The clauses below define the information elements related to the VnfExtCpd.

7.1.3.2 VnfExtCpd information element

7.1.3.2.1 Description

A VnfExtCpd is a type of Cpd and describes an external interface, a.k.a. external CP, exposed by this VNF enabling connection with a VL.

A VnfExtCpd inherits from the Cpd Class (see clause 7.1.6.3). All attributes of the Cpd are also attributes of the VnfExtCpd.

When the VnfExtCpd is mapped to a VduCpd, the values for the attributes type, subType and description shall be identical for both elements.

7.1.3.2.2 Attributes

The attributes of the VnfExtCpd information element shall follow the indications provided in table 7.1.3.2.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>intVirtualLinkDesc</td>
<td>M</td>
<td>0..1</td>
<td>Identifier (Reference to VnfVirtualLinkDesc)</td>
<td>Reference to the internal Virtual Link Descriptor (VLD) to which CPs instantiated from this external CP Descriptor (CPD) connect. Either intVirtualLinkDesc or intCpd shall be present.</td>
</tr>
<tr>
<td>intCpd</td>
<td>M</td>
<td>0..1</td>
<td>Identifier (Reference to VduCpd)</td>
<td>Reference to the internal VDU CPD which is used to instantiate internal CPs. These internal CPs are, in turn, exposed as external CPs defined by this external CPD. Either intVirtualLinkDesc or intCpd shall be present.</td>
</tr>
<tr>
<td>virtualNetworkInterfaceR</td>
<td>M</td>
<td>0..N</td>
<td>VirtualNetworkInterface Requirements</td>
<td>Specifies requirements on a virtual network interface realising the CPs instantiated from this CPD. See note.</td>
</tr>
<tr>
<td>(inherited attributes)</td>
<td>All</td>
<td></td>
<td></td>
<td>All attributes inherited from Cpd.</td>
</tr>
</tbody>
</table>

NOTE: In case of referencing an intCpd via its identifier, the virtualNetworkInterfaceRequirements attribute of the referenced intCpd applies.

7.1.3.3 AddressData information element

7.1.3.3.1 Description

The AddressData information element supports providing information about the addressing scheme and parameters applicable to a CP.
7.1.3.3.2 Attributes

The attributes of the AddressData information element shall follow the indications provided in table 7.1.3.3.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>addressType</td>
<td>M</td>
<td>1</td>
<td>Enum</td>
<td>Describes the type of the address to be assigned to the CP instantiated from the parent CPD. Value: • MAC address. • IP address. etc. The content type shall be aligned with the address type supported by the layerProtocol attribute of the parent CPD.</td>
</tr>
<tr>
<td>l2AddressData</td>
<td>M</td>
<td>0..1</td>
<td>Not specified</td>
<td>Provides the information on the MAC addresses to be assigned to the CP(s) instantiated from the parent CPD. Shall be present when the addressType is MAC address.</td>
</tr>
<tr>
<td>l3AddressData</td>
<td>M</td>
<td>0..1</td>
<td>L3AddressData</td>
<td>Provides the information on the IP addresses to be assigned to the CP instantiated from the parent CPD. Shall be present when the addressType is IP address. See clause 7.1.3.3.1.</td>
</tr>
</tbody>
</table>

7.1.3.4 L3AddressData information element

7.1.3.4.1 Description

The L3AddressData information element supports providing information about Layer 3 level addressing scheme and parameters applicable to a CP.

7.1.3.4.2 Attributes

The attributes of the L3AddressData information element shall follow the indications provided in table 7.1.3.4.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>iPAddressAssignment</td>
<td>M</td>
<td>1</td>
<td>Boolean</td>
<td>Specify if the address assignment is the responsibility of management and orchestration function or not. If it is set to True, it is the management and orchestration function responsibility.</td>
</tr>
<tr>
<td>floatingIpActivated</td>
<td>M</td>
<td>1</td>
<td>Boolean</td>
<td>Specify if the floating IP scheme is activated on the CP or not.</td>
</tr>
<tr>
<td>iPAddressType</td>
<td>M</td>
<td>0..1</td>
<td>Enum</td>
<td>Define address type. Value: • IPv4 address. • IPv6 address. See note.</td>
</tr>
<tr>
<td>numberOfIpAddress</td>
<td>M</td>
<td>0..1</td>
<td>Integer</td>
<td>Minimum number of IP addresses to be assigned based on this L3AddressData information element.</td>
</tr>
</tbody>
</table>

NOTE: The address type should be aligned with the address type supported by the layerProtocol attribute of the parent VnfExtCpd.
7.1.4 VnfdElementGroup information element

7.1.4.1 Description

A VNFD Element Group is a mechanism for associating elements of a VNFD (Vdus and VnfVirtualLinkDesc(s)) for a certain purpose, for example, scaling aspects.

A given element can belong to multiple groups.

7.1.4.2 Attributes

The attributes of the VnfdElementGroup information element shall follow the indications provided in table 7.1.4.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>vnfdElementGroupId</td>

<td>M</td>
<td>1</td>
<td>String</td>
<td>Human readable description of the group.</td>
</tr>
<tr>
<td>vdu</td>
<td>M</td>
<td>0..N</td>
<td>Identifier (Reference to Vdu)</td>
<td>References to Vdus that are part of this group.</td>
</tr>
<tr>
<td>virtualLinkDesc</td>
<td>M</td>
<td>0..N</td>
<td>Identifier (Reference to VnfVirtualLinkDesc)</td>
<td>References to VnfVirtualLinkDesc that are part of this group.</td>
</tr>
</tbody>
</table>

7.1.5 Information elements related to the configuration of VNF lifecycle management operations

7.1.5.1 Introduction

This clause defines information elements which represent information to configure lifecycle management operations as specified in ETSI GS NFV-IFA 007 [i.3].

7.1.5.2 VnfLcmOperationsConfiguration information element

7.1.5.2.1 Description

This information element is a container for all attributes that affect the invocation of the VNF Lifecycle Management operations, structured by operation.

7.1.5.2.2 Attributes

The VnfLcmOperationsConfiguration information element shall follow the indications provided in table 7.1.5.2.2-1.
### Table 7.1.5.2.2-1: Attributes of the VnfLcmOperationsConfiguration information element

<table>
<thead>

</tbody>
</table>

### 7.1.5.3 InstantiateVnfOpConfig information element

#### 7.1.5.3.1 Description

This information element defines attributes that affect the invocation of the InstantiateVnf operation.

#### 7.1.5.3.2 Attributes

The InstantiateVnfOpConfig information element shall follow the indications provided in table 7.1.5.3.2-1.

### Table 7.1.5.3.2-1: Attributes of the InstantiateVnfOpConfig information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>parameter</td>
<td>M</td>
<td>0..N</td>
<td>Not specified</td>
<td>Array of KVP requirements for VNF-specific parameters to be passed when invoking the InstantiateVnf operation. See note.</td>
</tr>
</tbody>
</table>

**NOTE:** It is assumed that the KVP requirements will be implicitly used to define the value type.

### 7.1.5.4 ScaleVnfOpConfig information element

#### 7.1.5.4.1 Description

This information element defines attributes that affect the invocation of the ScaleVnf operation.

#### 7.1.5.4.2 Attributes

The ScaleVnfOpConfig information element shall follow the indications provided in table 7.1.5.4.2-1.
Table 7.1.5.4.2-1: Attributes of the ScaleVnfOpConfig information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>parameter</td>
<td>M</td>
<td>0..N</td>
<td>Not specified</td>
<td>Array of KVP requirements for VNF-specific parameters to be passed when invoking the ScaleVnf operation. See note.</td>
</tr>
<tr>
<td>scalingByMoreThanOneStepSupported</td>
<td>M</td>
<td>0..1</td>
<td>Boolean</td>
<td>Signals whether passing a value larger than one in the numberOfSteps parameter of the ScaleVnf operation is supported by this VNF. Default is FALSE, i.e. &quot;not supported&quot;.</td>
</tr>
</tbody>
</table>

NOTE: It is assumed that the KVP requirements will be implicitly used to define the value type.

7.1.5.5 ScaleVnfToLevelOpConfig information element

7.1.5.5.1 Description

This information element defines attributes that affect the invocation of the ScaleVnfToLevel operation.

7.1.5.5.2 Attributes

The ScaleVnfToLevelOpConfig information element shall follow the indications provided in table 7.1.5.5.2-1.

Table 7.1.5.5.2-1: Attributes of the ScaleVnfToLevelOpConfig information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>parameter</td>
<td>M</td>
<td>0..N</td>
<td>Not specified</td>
<td>Array of KVP requirements for VNF-specific parameters to be passed when invoking the ScaleVnfToLevel operation. See note.</td>
</tr>
<tr>
<td>arbitraryTargetLevelsSupported</td>
<td>M</td>
<td>1</td>
<td>Boolean</td>
<td>Signals whether scaling according to the parameter &quot;scaleInfo&quot; is supported by this VNF.</td>
</tr>
</tbody>
</table>

NOTE: It is assumed that the KVP requirements will be implicitly used to define the value type.

7.1.5.6 HealVnfOpConfig information element

7.1.5.6.1 Description

This information element defines attributes that affect the invocation of the HealVnf operation.

7.1.5.6.2 Attributes

The HealVnfOpConfig information element shall follow the indications provided in table 7.1.5.6.2-1.

Table 7.1.5.6.2-1: Attributes of the HealVnfOpConfig information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Not specified</td>
<td>Array of KVP requirements for VNF-specific parameters to be passed when invoking the HealVnf operation. See note.</td>
</tr>
<tr>
<td>cause</td>
<td>M</td>
<td>0..N</td>
<td>String</td>
<td>Supported &quot;cause&quot; parameter values.</td>
</tr>
</tbody>
</table>

NOTE: It is assumed that the KVP requirements will be implicitly used to define the value type.

7.1.5.7 TerminateVnfOpConfig information element

7.1.5.7.1 Description

This information element defines attributes that affect the invocation of the TerminateVnf operation.
7.1.5.7.2 Attributes

The TerminateVnfOpConfig information element shall follow the indications provided in table 7.1.5.7.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>

<td>Minimum timeout value for graceful termination of a VNF instance.</td>
</tr>
<tr>
<td>maximumRecommendedGracefulTerminationTimeout</td>
<td>M</td>
<td>0..1</td>
<td>Number</td>
<td>Maximum recommended timeout value that can be needed to gracefully terminate a VNF instance of a particular type under certain conditions, such as maximum load condition. This is provided by VNF provider as information for the operator facilitating the selection of optimal timeout value. This value is not used as constraint.</td>
</tr>
<tr>
<td>parameter</td>
<td>M</td>
<td>0..N</td>
<td>Not specified</td>
<td>Array of KVP requirements for VNF-specific parameters to be passed when invoking the TerminateVnf operation. See note.</td>
</tr>
</tbody>
</table>

NOTE: It is assumed that the KVP requirements will be implicitly used to define the value type.

7.1.5.8 OperateVnfOpConfig information element

7.1.5.8.1 Description

This information element defines attributes that affect the invocation of the OperateVnf operation.

7.1.5.8.2 Attributes

The OperateVnfOpConfig information element shall follow the indications provided in table 7.1.5.8.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>

<td>M</td>
<td>0..1</td>
<td>Number</td>
<td>Maximum recommended timeout value that can be needed to gracefully stop a VNF instance of a particular type under certain conditions, such as maximum load condition. This is provided by VNF provider as information for the operator facilitating the selection of optimal timeout value. This value is not used as constraint.</td>
</tr>
<tr>
<td>parameter</td>
<td>M</td>
<td>0..N</td>
<td>Not specified</td>
<td>Array of KVP requirements for VNF-specific parameters to be passed when invoking the OperateVnf operation. See note.</td>
</tr>
</tbody>
</table>

NOTE: It is assumed that the KVP requirements will be implicitly used to define the value type.

7.1.5.9 ChangeVnfFlavourOpConfig information element

7.1.5.9.1 Description

This information element defines attributes that affect the invocation of the ChangeVnfFlavour operation.

7.1.5.9.2 Attributes

The ChangeVnfFlavourOpConfig information element shall follow the indications provided in table 7.1.5.9.2-1.
Table 7.1.5.9.2-1: Attributes of the ChangeVnfFlavourOpConfig information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>

</tbody>
</table>

NOTE: It is assumed that the KVP requirements will be implicitly used to define the value type.

7.1.6 Information elements related to the Vdu

7.1.6.1 Introduction

The clauses below define the information elements related to the Vdu.

7.1.6.2 Vdu information element

7.1.6.2.1 Description

The Virtualisation Deployment Unit (VDU) is a construct supporting the description of the deployment and operational behaviour of a VNFC.

A VNFC instance created based on the VDU maps to a single virtualisation container (e.g. a VM).

A UML representation of the Vdu high-level structure is shown in figure 7.1.6.2.1-1.
7.1.6.2.2 Attributes

The attributes of the Vdu information element shall follow the indications provided in table 7.1.6.2.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>vduId</td>
<td>M</td>
<td>1</td>
<td>Identifier</td>
<td>Unique identifier of this Vdu in VNFD.</td>
</tr>
<tr>
<td>name</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>Human readable name of the Vdu.</td>
</tr>
<tr>
<td>description</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>Human readable description of the Vdu.</td>
</tr>
<tr>
<td>intCpd</td>
<td>M</td>
<td>1..N</td>
<td>VduCpd</td>
<td>Describes network connectivity between a VNFC instance (based on this Vdu) and an internal Virtual Link (VL). See clause 7.1.6.4.</td>
</tr>
<tr>
<td>virtualComputeDesc</td>
<td>M</td>
<td>1</td>
<td>Identifier (reference to VirtualComputeDesc)</td>
<td>Describes CPU, Memory and acceleration requirements of the Virtualisation Container realising this Vdu. See clause 7.1.9.2.2.</td>
</tr>
<tr>
<td>virtualStorageDesc</td>
<td>M</td>
<td>0..N</td>
<td>Identifier (reference to VirtualStorageDesc)</td>
<td>Describes storage requirements for a VirtualStorage instance attached to the virtualisation container created from virtualComputeDesc defined for this Vdu. See clause 7.1.9.4.</td>
</tr>
<tr>
<td>bootOrder</td>
<td>M</td>
<td>0..N</td>
<td>KeyValuePair</td>
<td>The key indicates the boot index (lowest index defines highest boot priority). The Value references a descriptor from which a valid boot device is created e.g. VirtualStorageDesc from which a VirtualStorage instance is created. See note 1.</td>
</tr>
<tr>
<td>swImageDesc</td>
<td>M</td>
<td>0..1</td>
<td>Identifier (Reference to SwImageDesc)</td>
<td>Describes the software image which is directly loaded on the virtualisation container realising this Vdu. See clause 7.1.6.5. See note 2.</td>
</tr>
<tr>
<td>nfviConstraint</td>
<td>M</td>
<td>0..N</td>
<td>String</td>
<td>Describes constraints on the NFVI for the VNFC instance(s) created from this Vdu. For example, aspects of a secure hosting environment for the VNFC instance that involve additional entities or processes. See note 3.</td>
</tr>
</tbody>
</table>
### 7.1.6.3 Cpd information element

#### 7.1.6.3.1 Description

A Cpd information element describes network connectivity to a compute resource or a VL. This is an abstract class used as parent for the various Cpd classes.

#### 7.1.6.3.2 Attributes

The attributes of the Cpd information element shall follow the indications provided in table 7.1.6.3.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cpdId</td>
<td>M</td>
<td>1</td>
<td>Identifier</td>
<td>Identifier of this Cpd information element.</td>
</tr>
<tr>
<td>layerProtocol</td>
<td>M</td>
<td>0..N</td>
<td>Enum</td>
<td>Identifies which protocol the CP uses for connectivity purposes (Ethernet, MPLS, ODU2, IPV4, IPV6, Pseudo-Wire, etc.). See note.</td>
</tr>
<tr>
<td>cpRole</td>
<td>M</td>
<td>0..1</td>
<td>String</td>
<td>Identifies the role of the port in the context of the traffic flow patterns in the VNF or parent NS. For example a VNF with a tree flow pattern within the VNF will have legal cpRoles of ROOT and LEAF.</td>
</tr>
<tr>
<td>description</td>
<td>M</td>
<td>0..1</td>
<td>String</td>
<td>Provides human-readable information on the purpose of the CP (e.g. CP for control plane traffic).</td>
</tr>
<tr>
<td>cpProtocol</td>
<td>M</td>
<td>1..N</td>
<td>CpProtocolData</td>
<td>Identifies the protocol layering information the CP uses for connectivity purposes and associated information. There shall be one cpProtocol for each layer protocol as indicated by the attribute layerProtocol.</td>
</tr>
<tr>
<td>trunkMode</td>
<td>M</td>
<td>1</td>
<td>Boolean</td>
<td>Information about whether the CP instantiated from this CPD is in Trunk mode (802.1Q or other).</td>
</tr>
</tbody>
</table>

**NOTE:** This information determines, amongst other things, which type of address to assign to the access point at instantiation time.

#### 7.1.6.4 VduCpd information element

#### 7.1.6.4.1 Description

A VduCpd information element is a type of Cpd and describes network connectivity between a VNFC instance (based on this VDU) and an internal VL.
A VduCpd inherits from the Cpd Class (see clause 7.1.6.3). All attributes of the Cpd are also attributes of the VduCpd.

### 7.1.6.4.2 Attributes

The attributes of the VduCpd information element shall follow the indications provided in table 7.1.6.4.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>intVirtualLinkDesc</td>
<td>M</td>
<td>0..1</td>
<td>Identifier (Reference to VnfVirtualLinkDesc)</td>
<td>Reference of the internal VLD which this internal CPD connects to.</td>
</tr>
<tr>
<td>bitrateRequirement</td>
<td>M</td>
<td>0..1</td>
<td>Number</td>
<td>Bitrate requirement on this CP.</td>
</tr>
<tr>
<td>virtualNetworkInterfaceRe-</td>
<td>M</td>
<td>0..N</td>
<td>VirtualNetworkInterfaceRequirements</td>
<td>Specifies requirements on a virtual network interface realising the CPs instantiated from this CPD.</td>
</tr>
<tr>
<td>quirements</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(inherited attributes)</td>
<td></td>
<td></td>
<td></td>
<td>All attributes inherited from Cpd.</td>
</tr>
</tbody>
</table>

### 7.1.6.5 SwImageDesc information element

#### 7.1.6.5.1 Description

This information element describes the software image for a particular VDU or a virtual storage resource.

#### 7.1.6.5.2 Attributes

The attributes of the SwImageDesc information element shall follow the indications provided in table 7.1.6.5.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>M</td>
<td>1</td>
<td>Identifier</td>
<td>The identifier of this software image.</td>
</tr>
<tr>
<td>name</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>The name of this software image.</td>
</tr>
<tr>
<td>version</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>The version of this software image.</td>
</tr>
<tr>
<td>checksum</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>The checksum of the software image file.</td>
</tr>
<tr>
<td>containerFormat</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>The container format describes the container file format in which software image is provided.</td>
</tr>
<tr>
<td>diskFormat</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>The disk format of a software image is the format of the underlying disk image.</td>
</tr>
<tr>
<td>minDisk</td>
<td>M</td>
<td>0..1</td>
<td>Number</td>

7.1.7 Information elements related to the VLD

7.1.7.1 Introduction
The clauses below define the information elements related to the VLD.

7.1.7.2 VnfVirtualLinkDesc information element

7.1.7.2.1 Description
The VnfVirtualLinkDesc information element supports providing information about an internal VNF VL.

7.1.7.2.2 Attributes
The attributes of the VnfVirtualLinkDesc information element shall follow the indications provided in table 7.1.7.2.2-1.

Table 7.1.7.2.2-1: Attributes of the VnfVirtualLinkDesc information element

</tbody>
</table>

7.1.8 Information elements related to the DeploymentFlavour

7.1.8.1 Introduction
The clauses below define the information elements related to the DF.

7.1.8.2 VnfDf information element

7.1.8.2.1 Description
The VnfDf describes a specific deployment version of a VNF.
7.1.8.2.2 Attributes

The attributes of the VnfDf information element shall follow the indications provided in table 7.1.8.2.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>flavourId</td>
<td>M</td>
<td>1</td>
<td>Identifier</td>
<td>Identifier of this DF within the VNFD.</td>

<td>1</td>
<td>VnfLcmOperationsConfiguration</td>
<td>Configuration parameters for the VNF Lifecycle Management operations.</td>
</tr>
<tr>
<td>affinityOrAntiAffinityGroup</td>
<td>M</td>
<td>0..N</td>
<td>AffinityOrAntiAffinityGroup</td>
<td>Specifies affinity or anti-affinity relationship applicable between the virtualisation containers (e.g. virtual machines) to be created using different VDUs or internal VLs to be created using different VnfVirtualLinkDesc(s) in the same affinity or anti-affinity group. See clause 7.1.8.12. (See note 3).</td>
</tr>
<tr>
<td>vnfIndicator</td>
<td>M</td>
<td>0..N</td>
<td>VnfIndicator</td>
<td>Declares the VNF indicators that are supported by this VNF (specific to this DF).</td>
</tr>
<tr>
<td>monitoringParameter</td>
<td>M</td>
<td>0..N</td>
<td>MonitoringParameter</td>
<td>Specifies the virtualised resource related performance metrics to be tracked by the VNFM. MonitoringParameter is defined in clause 7.1.11.3.</td>
</tr>
<tr>
<td>scalingAspect</td>
<td>M</td>
<td>0..N</td>
<td>ScalingAspect</td>
<td>The scaling aspects supported by this DF of the VNF. scalingAspect shall be present if the VNF supports scaling.</td>
</tr>
<tr>
<td>initialDelta</td>
<td>M</td>
<td>0..1</td>
<td>ScalingDelta</td>
<td>Represents the minimum size of the VNF (i.e. scale level zero for all scaling aspects). Shall be present if the &quot;aspectDeltaDetails&quot; attribute is present in the &quot;ScalingAspect&quot; information element.</td>
</tr>
</tbody>
</table>

NOTE 1: This allows for different VNF internal topologies between DFs.
NOTE 2: vduProfile needs to be provided for all VLs that the CPs of the VDUs in the VDU profiles connect to.
NOTE 3: In the present document, including either VDU(s) or VnfVirtualLinkDesc(s) into the same affinity or anti-affinity group is supported. Extension to support including both VDU(s) and VnfVirtualLinkDesc(s) into the same affinity or anti-affinity group is left for future specification.
7.1.8.3 VduProfile information element

7.1.8.3.1 Description

The VduProfile describes additional instantiation data for a given VDU used in a DF.

7.1.8.3.2 Attributes

The attributes of the VduProfile information element shall follow the indications provided in table 7.1.8.3.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>M</td>
<td>1</td>
<td>Identifier (Reference to Vdu)</td>
<td>Uniquely identifies a VDU.</td>
</tr>
<tr>
<td>minNumberOfInstances</td>
<td>M</td>
<td>1</td>
<td>Integer</td>
<td>Minimum number of instances of the VNFC based on this VDU that is permitted to exist for this flavour.</td>
</tr>
<tr>
<td>maxNumberOfInstances</td>
<td>M</td>
<td>1</td>
<td>Integer</td>
<td>Maximum number of instances of the VNFC based on this VDU that is permitted to exist for this flavour.</td>
</tr>
<tr>
<td>localAffinityOrAntiAffinityRule</td>
<td>M</td>
<td>0..N</td>
<td>LocalAffinityOrAntiAffinityRule</td>
<td>Specifies affinity or anti-affinity rules applicable between the virtualisation containers (e.g. virtual machines) to be created based on this VDU. See clause 7.1.8.11. When the cardinality is greater than 1, both affinity rule(s) and anti-affinity rule(s) with different scopes (e.g. &quot;Affinity with the scope resource zone and anti-affinity with the scope NFVI node&quot;) are applicable to the virtualisation containers (e.g. virtual machines) to be created based on this VDU.</td>
</tr>
<tr>
<td>affinityOrAntiAffinityGroupId</td>
<td>M</td>
<td>0..N</td>
<td>Identifier</td>
<td>Identifier(s) of the affinity or anti-affinity group(s) the VDU belongs to. See note.</td>
</tr>
</tbody>
</table>

NOTE: Each identifier references an affinity or anti-affinity group which expresses affinity or anti-affinity relationships between the virtualisation container(s) (e.g. virtual machine(s)) to be created using this VDU and the virtualisation container(s) (e.g. virtual machine(s)) to be created using other VDU(s) in the same group.

7.1.8.4 VirtualLinkProfile information element

7.1.8.4.1 Description

The VirtualLinkProfile describes additional instantiation data for a given VL used in a DF.

7.1.8.4.2 Attributes

The attributes of the VirtualLinkProfile information element shall follow the indications provided in table 7.1.8.4.2-1.
Table 7.1.8.4.2-1: Attributes of the VirtualLinkProfile information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>

<td>Identifies a flavour within the VnfVirtualLinkDesc.</td>
</tr>
<tr>
<td>localAffinityOrAntiAffinityRule</td>
<td>M</td>
<td>0..N</td>
<td>LocalAffinityOrAntiAffinityRule</td>
<td>Specifies affinity or anti-affinity rules applicable between the VLs based on this VnfVirtualLinkDesc. See clause 7.1.8.4. When the cardinality is greater than 1, both affinity rule(s) and anti-affinity rule(s) with different scopes are applicable to the VLs based on this VnfVirtualLinkDesc.</td>
</tr>
<tr>
<td>affinityOrAntiAffinityGroupId</td>
<td>M</td>
<td>0..N</td>
<td>Identifier</td>
<td>Identifiers of the affinity or anti-affinity group(s) the VnfVirtualLinkDesc belongs to. See note 1.</td>
</tr>
<tr>
<td>maxBitRateRequirements</td>
<td>M</td>
<td>1</td>
<td>LinkBitrateRequirements</td>
<td>Specifies the maximum bitrate requirements for a VL instantiated according to this profile. See clause 7.1.8.6. See note 2.</td>
</tr>
<tr>
<td>minBitRateRequirements</td>
<td>M</td>
<td>1</td>
<td>LinkBitrateRequirements</td>
<td>Specifies the minimum bitrate requirements for a VL instantiated according to this profile. See clause 7.1.8.6. See note 2.</td>
</tr>
</tbody>
</table>

NOTE 1: Each identifier references an affinity or anti-affinity group which expresses affinity or anti-affinity relationship between the VL(s) using this VnfVirtualLinkDesc and the VL(s) using other VnfVirtualLinkDesc(s) in the same group.

NOTE 2: These attributes are used to control scaling boundaries.

7.1.8.5 VirtualLinkDescFlavour information element

7.1.8.5.1 Description

The VirtualLinkDescFlavour describes additional instantiation data for a given internal VL used in a DF.

7.1.8.5.2 Attributes

The attributes of the VirtualLinkDescFlavour information element shall follow the indications provided in table 7.1.8.5.2-1.

Table 7.1.8.5.2-1: Attributes of the VirtualLinkDescFlavour information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>0..1</td>
<td>QoS</td>
<td>QoS of the VL.</td>
</tr>
</tbody>
</table>

7.1.8.6 LinkBitrateRequirements information element

7.1.8.6.1 Description

The LinkBitrateRequirements information element describes the requirements in terms of bitrate for a VL.
7.1.8.6.2 Attributes

The attributes of the LinkBitrateRequirements information element shall follow the indications provided in table 7.1.8.6.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>root</td>
<td>M</td>
<td>1</td>
<td>Number</td>
<td>Throughput requirement of the link (e.g. bitrate of E-Line, root bitrate of E-Tree, aggregate capacity of E-LAN).</td>
</tr>
<tr>
<td>leaf</td>
<td>M</td>
<td>0..1</td>
<td>Number</td>
<td>Throughput requirement of leaf connections to the link when applicable to the connectivity type (e.g. for E-Tree and E-LAN branches). See note.</td>
</tr>
</tbody>
</table>

NOTE: The present document does not specify the means to declare different bitrate requirements for leaf connections (e.g. E-LAN leaves).

Table 7.1.8.6.2-1: Attributes of the LinkBitrateRequirements information element

7.1.8.7 InstantiationLevel information element

7.1.8.7.1 Description

The InstantiationLevel information element describes a given level of resources to be instantiated within a DF in term of the number of VNFC instances to be created from each VDU and bit rate requirements.

All theVDUs referenced in the level shall be part of the corresponding DF and their number shall be within the range (min/max) for this DF.

7.1.8.7.2 Attributes

The attributes of the InstantiationLevel information element shall follow the indications provided in table 7.1.8.7.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>levelId</td>
<td>M</td>
<td>1</td>

<td>1</td>
<td>String</td>
<td>Human readable description of the level.</td>
</tr>
<tr>
<td>vduLevel</td>
<td>M</td>
<td>1..N</td>
<td>VduLevel</td>
<td>Indicates the number of instance of this VDU to deploy for this level.</td>
</tr>
<tr>
<td>virtualLinkBitRateLevel</td>
<td>M</td>
<td>0..N</td>
<td>VirtualLinkBitRateLevel</td>
<td>Specifies bitrate requirements applicable to virtual links created from particular virtual link descriptors for this level. See note.</td>
</tr>
<tr>
<td>scaleInfo</td>
<td>M</td>
<td>0..N</td>
<td>ScaleInfo</td>
<td>Represents for each aspect the scale level that corresponds to this instantiation level. scaleInfo shall be present if the VNF supports scaling.</td>
</tr>
</tbody>
</table>

NOTE: If not present, it is assumed that the bitrate requirements can be derived from those specified in the VduCpd instances applicable to the internal VL. If present in both the InstantiationLevel and the VduCpd instances applicable to the internal VL, the highest value takes precedence.

Table 7.1.8.7.2-1: Attributes of the InstantiationLevel information element

7.1.8.8 ScaleInfo information element

7.1.8.8.1 Description

The ScaleInfo information element represents a scale level for a particular scaling aspect.
7.1.8.8.2 Attributes

The attributes of the ScaleInfo information element shall follow the indications provided in table 7.1.8.8.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>

<td>Maximum packet loss ratio. Cardinality is 0 if no packetLossRatio requirement exists.</td>
</tr>
</tbody>
</table>

7.1.8.11 LocalAffinityOrAntiAffinityRule information element

7.1.8.11.1 Description

The LocalAffinityOrAntiAffinityRule describes the affinity or anti-affinity rule applicable between the virtualization containers to be created based on a particular VDU, or between internal VLs to be created based on a particular VnfVirtualLinkDesc.
Per VNF, the affinity/anti-affinity rules defined using this information element, using the AffinityOrAntiAffinityGroup information element, and using the placement constraints in the GrantLifecycleOperation as defined in ETSI GS NFV-IFA 007 [i.3] should be conflict-free. In case of conflicts, the placement constraints in the GrantLifecycleOperation shall take precedence.

7.1.8.11.2 Attributes

The attributes of the LocalAffinityOrAntiAffinityRule information element shall follow the indications provided in table 7.1.8.11.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>

<td>Specifies the scope of the rule, possible values are “NFVI-PoP”, “Zone”, “ZoneGroup”, “NFVI-node”.</td>
</tr>
</tbody>
</table>

7.1.8.12 AffinityOrAntiAffinityGroup information element

7.1.8.12.1 Description

The AffinityOrAntiAffinityGroup describes the affinity or anti-affinity relationship applicable between the virtualization containers to be created based on different VDUs, or between internal VLS to be created based on different VnfVirtualLinkDesc(s).

Per VNF, the affinity/anti-affinity rules defined using this information element, using the LocalAffinityOrAntiAffinityRule information element, and using the placement constraints in the GrantLifecycleOperation as defined in ETSI GS NFV-IFA 007 [i.3] should be conflict-free. In case of conflicts, the placement constraints in the GrantLifecycleOperation shall take precedence.

7.1.8.12.2 Attributes

The attributes of the AffinityOrAntiAffinityGroup information element shall follow the indications provided in table 7.1.8.12.2-1.

7.1.9 Information elements related to Virtual Resource descriptors

7.1.9.1 Introduction

The clauses below define the Information elements related to Virtual Resource descriptors.
7.1.9.2 Information elements related to Virtual CPU

7.1.9.2.1 Introduction

The clauses below define the information elements related to Virtual CPU.

7.1.9.2.2 VirtualComputeDesc information element

7.1.9.2.2.1 Description

The VirtualComputeDesc information element supports the specification of requirements related to virtual compute resources.

7.1.9.2.2.2 Attributes

The attributes of the VirtualComputeDesc information element shall follow the indications provided in table 7.1.9.2.2.2-1.

If the VIM supports the concept of virtual compute resource flavours, it is assumed that a flavour is selected or created based on the information in the VirtualComputeDesc information element.

<table>
<thead>

7.1.9.3 Information elements related to Virtual Memory

7.1.9.3.1 Introduction

The clauses below define the information elements related to Virtual Memory.
7.1.9.3.2 VirtualMemoryData information element

7.1.9.3.2.1 Description

The VirtualMemoryData information element supports the specification of requirements related to virtual memory of a virtual compute resource.

7.1.9.3.2.2 Attributes

The attributes of the VirtualMemoryData information element shall follow the indications provided in table 7.1.9.3.2.2-1.

7.1.9.4 Information elements related to Virtual Storage

7.1.9.4.1 Introduction

The clauses below define the information elements related to Virtual Storage.

7.1.9.4.2 VirtualStorageDesc information element

7.1.9.4.2.1 Description

The VirtualStorageDesc information element supports the specifications of requirements related to virtual storage resources.

7.1.9.4.2.2 Attributes

The attributes of the VirtualStorageDesc information element shall follow the indications provided in table 7.1.9.4.2.2-1.
Table 7.1.9.4.2.2-1: Attributes of the VirtualStorageDesc information element

7.1.9.5 RequestedAdditionalCapabilityData information element

7.1.9.5.1 Description
This information element describes requested additional capability for a particular VDU. Such a capability may be for acceleration or specific tasks.

7.1.9.5.2 Attributes
The attributes of the RequestedAdditionalCapabilityData information element shall follow the indications provided in table 7.1.9.5.2-1.

Table 7.1.9.5.2-1: Attributes of the RequestedAdditionalCapabilityData information element

</table>

7.1.9.6 logicalNodeData information element

7.1.9.6.1 Description
This information element describes compute, memory and I/O requirements that are to be associated with the logical node of infrastructure. The logical node requirements are a sub-component of the VDU level requirements. As an example for illustration purposes, a logical node correlates to the concept of a NUMA cell in libvirt terminology.

7.1.9.6.2 Attributes
The attributes of the logicalNodeData information element shall follow the indications provided in table 7.1.9.6.2-1.
### Table 7.1.9.6.2-1: Attributes of the logicalNodeData information element

<table>
<thead>
<tr>
<th>Attribute</th>

<td>The logical node-level compute, memory and I/O requirements. An array of key-value pairs that articulate the deployment requirements. This could include the number of CPU cores on this logical node, a memory configuration specific to a logical node (e.g., such as available in the Linux kernel via the libnuma library) or a requirement related to the association of an I/O device with the logical node.</td>
</tr>
</tbody>
</table>

### 7.1.10 Information elements related to scaling

#### 7.1.10.1 Introduction

The clauses below define the information elements related to scaling.

#### 7.1.10.2 ScalingAspect information element

##### 7.1.10.2.1 Description

The ScalingAspect information element describes the details of an aspect used for horizontal scaling.

##### 7.1.10.2.2 Attributes

The attributes of the ScalingAspect information element shall follow the indications provided in table 7.1.10.2.2-1.
Table 7.1.10.2.2-1: Attributes of the ScalingAspect information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>M</td>
<td>1</td>
<td>Identifier</td>
<td>Unique identifier of this aspect in the VNFD.</td>
</tr>
<tr>
<td>name</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>Human readable name of the aspect.</td>
</tr>
<tr>
<td>description</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>Human readable description of the aspect.</td>
</tr>
<tr>
<td>associatedGroup</td>
<td>M</td>
<td>0..1</td>
<td>Identifier (Reference to VnfdElementGroup)</td>
<td>Reference to the group of VNFD elements defining this aspect. If present, scaling for this aspect is limited to the elements of the group, but there is no assumption that all the elements of the groups will be increased at each step. See notes 1 and 4.</td>
</tr>
<tr>
<td>maxScaleLevel</td>
<td>M</td>
<td>1</td>
<td>PositiveInteger</td>
<td>The maximum scaleLevel for total number of scaling steps that can be applied w.r.t. this aspect. The value of this attribute corresponds to the number of scaling steps can be applied to this aspect when scaling it from the minimum scale level (i.e. 0) to the maximum scale level defined by this attribute. See note 2.</td>
</tr>
<tr>
<td>aspectDeltaDetails</td>
<td>M</td>
<td>0..1</td>
<td>AspectDeltaDetails</td>
<td>A specification of the deltas in terms of number of instances of VNFCs and virtual link bit rates that correspond to the scaling steps of this aspect. A cardinality of zero indicates that this mapping has to be specified in a lifecycle management script or be otherwise known to the VNFM. The information in this attribute, if provided, shall be consistent with the information provided in the &quot;InstantiationLevel&quot; information element. If this attribute is provided, it shall be provided for all scaling aspects. See notes 3 and 4.</td>
</tr>
</tbody>
</table>

NOTE 1: In the present release of the specification, support for modifying the internal VNF topology during the scaling of the internal VLs, is not required.

NOTE 2: A scaling step is the smallest increment by which a VNF can be scaled for a particular aspect. Scaling by a single step does not imply that only one VNFC instance is created or removed. It means that one or more VNFC instances are created from the same VDU or from different VDUs, or that a more complex setup occurs.

NOTE 3: The presence of this attribute does not preclude associating lifecycle management scripts to scaling-related events in the VNFD.

NOTE 4: It is discouraged to provide both associatedGroup and aspectIncrementDetails, but if they are both present they shall not conflict.

7.1.10.3 AspectDeltaDetails information element

7.1.10.3.1 Description

The AspectDeltaDetails information element defines the increments in terms of number of instances of VNFCs and virtual link flavours that correspond to the scaling steps of a scaling aspect.

7.1.10.3.2 Attributes

The attributes of the AspectDeltaDetails information element shall follow the indications provided in table 7.1.10.3.2-1.
Table 7.1.10.3.2-1: Attributes of the AspectDeltaDetails information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>uniformDelta</td>
<td>M</td>
<td>0..1</td>
<td>ScalingDelta</td>
<td>Scaling delta to be applied for every scaling step of this aspect. This attribute allows to model uniform scaling steps. See note.</td>
</tr>
<tr>
<td>deltas</td>
<td>M</td>
<td>0..N</td>
<td>ScalingDelta</td>
<td>Scaling deltas to be applied for the different subsequent scaling steps of this aspect. The first entry in the array shall correspond to the first scaling step (between scale levels 0 to 1) and the last entry of the array shall correspond to the last scaling step (between maxScaleLevel-1 and maxScaleLevel). See note.</td>
</tr>
</tbody>
</table>

NOTE: Either "uniformDelta" or "deltas" but not both shall be present.

7.1.10.4 ScalingDelta information element

7.1.10.4.1 Description

For a particular scaling aspect, the ScalingDelta information element defines the number of instances per VNFC and the bitrate delta per virtual link that corresponds to a single scaling step. When scaling out by one step, this delta is added to the resources of the VNF instance, whereas when scaling in, this delta is removed.

7.1.10.4.2 Attributes

The attributes of the ScalingDelta information element shall follow the indications provided in table 7.1.10.4.2-1.

Table 7.1.10.4.2-1: Attributes of the ScalingDelta information element

<table>
<thead>
<tr>
<th>Attribute</th>

</tr>
<tr>
<td>virtualLinkBitRateDelta</td>
<td>M</td>
<td>0..N</td>
<td>VirtualLinkBitRateLevel</td>
<td>The bitrate to be added or removed to virtual links created from particular virtual link descriptors.</td>
</tr>
</tbody>
</table>

7.1.10.5 VirtualLinkBitRateLevel information element

7.1.10.5.1 Description

The VirtualLinkBitRateLevel information element specifies bitrate requirements applicable to a virtual link instantiated from a particular VnfVirtualLinkDesc.

7.1.10.5.2 Attributes

The attributes of the VirtualLinkBitRateLevel information element shall follow the indications provided in table 7.1.10.5.2-1.

Table 7.1.10.5.2-1: Attributes of the VirtualLinkBitRateLevel information element

<table>
<thead>
<tr>

</tbody>
</table>
7.1.11 Information elements related to monitoring

7.1.11.1 Introduction
The clause below define the information elements related to monitoring.

7.1.11.2 VnfIndicator information element

7.1.11.2.1 Description
The VnfIndicator information element defines the indicator the VNF supports.

7.1.11.2.2 Attributes
The attributes of the VnfIndicator information element shall follow the indications provided in table 7.1.11.2.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>

<td></td>
<td></td>
<td>• Both.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>This tells the consumer where to send the subscription request.</td>
</tr>
</tbody>
</table>

7.1.11.3 MonitoringParameter information element

7.1.11.3.1 Description
This information element specifies the virtualised resource related performance metrics to be tracked by the VNFM, e.g. for auto-scaling purposes. The VNFM collects the values of performance metrics identified by this information element from the VIM(s) using one or more locally initiated PM Jobs. These values can be used as inputs to auto-scaling rules.

7.1.11.3.2 Attributes
The attributes of the MonitoringParameter information element shall follow the indications provided in table 7.1.11.3.2-1.
### Table 7.1.11.3.2-1: Attributes of the MonitoringParameter information element

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>M</td>
<td>1</td>
<td>Identifier</td>
<td>Unique identifier of the monitoring parameter.</td>
</tr>
<tr>
<td>name</td>
<td>M</td>
<td>0..1</td>
<td>String</td>
<td>Human readable name of the monitoring parameter.</td>
</tr>
<tr>
<td>performanceMetric</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>Identifies the virtualised resource performance metric.</td>
</tr>
<tr>
<td>collectionPeriod</td>
<td>M</td>
<td>0..1</td>
<td>Not specified</td>
<td>An attribute that describes the recommended periodicity at which to collect the performance information. VNFM determines if this parameter is considered. The vendor may provide this information as a guidance for creating PmJobs if needed. See note.</td>
</tr>
</tbody>
</table>

**NOTE:** The MANO or NFVI may not support the recommended `collectionPeriod` based on their functionalities, and can reject the requests based on the recommended `collectionPeriod` in this case.

### 7.1.12 VnfConfigurableProperties information element

#### 7.1.12.1 Description

This information element defines the configurable properties of a VNF (e.g. related to auto scaling and auto healing). For a VNF instance, the value of these properties can be modified by the VNFM.

#### 7.1.12.2 Attributes

The attributes of the VnfConfigurableProperties information element shall follow the indications provided in table 7.1.12.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>isAutoscaleEnabled</td>
<td>M</td>
<td>0..1</td>
<td>Boolean</td>
<td>It permits to enable (TRUE)/disable (FALSE) the auto-scaling functionality. See note.</td>
</tr>
<tr>
<td>isAutohealEnabled</td>
<td>M</td>
<td>0..1</td>
<td>Boolean</td>
<td>It permits to enable (TRUE)/disable (FALSE) the auto-healing functionality. See note.</td>
</tr>
<tr>
<td>additionalConfigurableProperty</td>
<td>M</td>
<td>0..N</td>
<td>Not specified</td>
<td>It provides VNF specific configurable properties that can be modified using the ModifyVnfInfo operation.</td>
</tr>
</tbody>
</table>

**NOTE:** A cardinality of "0" indicates that configuring this present VNF property is not supported.

### 7.1.13 LifeCycleManagementScript information element

#### 7.1.13.1 Description

Clause 7.1.13.2 defines the information elements related to the lifecycle management script for the VNF.
7.1.13.2 Attributes

The content of the LifeCycleManagementScript type shall comply with the indications provided in table 7.1.13.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>event</td>
<td>M</td>
<td>0..N</td>
<td>Enum</td>
<td>Describes VNF lifecycle event(s) or an external stimulus detected on a VNFM reference point. The set of lifecycle events triggered internally by the VNFM includes: EVENT_START_INSTANTIATION, EVENT_END_INSTANTIATION, EVENT_START_SCALING_IN, EVENT_END_SCALING_IN, EVENT_START_SCALING_OUT, EVENT_END_SCALING_OUT, EVENT_START_HEALING, EVENT_END_HEALING, EVENT_START_TERMINATION, EVENT_END_TERMINATION, EVENT_START_VNF_FLAVOR_CHANGE, EVENT_END_VNF_FLAVOR_CHANGE, EVENT_START_VNF_OPERATION_CHANGE, EVENT_END_VNF_OPERATION_CHANGE, EVENT_START_VNF_EXT_CONN_CHANGE, EVENT_END_VNF_EXT_CONN_CHANGE, EVENT_START_VNFINFO_MODIFICATION, EVENT_END_VNFINFO_MODIFICATION. The set of external stimuli includes: the receipt of request message of instantiation, scaling, healing, termination, change of VNF flavour, change of the operation state of the VNF, change of external VNF connectivity, modification of VNF information or the receipt of a notification regarding the change of a VNF indicator value. See note 1.</td>
</tr>
<tr>
<td>lcmTransitionEvent</td>
<td>M</td>
<td>0..N</td>
<td>String</td>
<td>Describes the transition VNF lifecycle event(s) that cannot be mapped to any of the enumerated values defined for the event attribute. See note 1.</td>
</tr>
<tr>
<td>script</td>
<td>M</td>
<td>1</td>

<td>Includes a VNF LCM script (e.g. written in a DSL as specified in requirement VNF_PACK.LCM.001) triggered to react to one of the events listed in the event attribute.</td>
</tr>
<tr>
<td>scriptDsl</td>
<td>M</td>
<td>1</td>
<td>String</td>
<td>Defines the domain specific language (i.e. the type) of script that is provided. Types of scripts could include bash, python, etc.</td>
</tr>
<tr>
<td>scriptInput</td>
<td>M</td>
<td>0..N</td>
<td>Not specified</td>
<td>Array of KVP requirements with the key as the parameter name and the value as the parameter that need to be passed as an input to the script. See note 3.</td>
</tr>
</tbody>
</table>

NOTE 1: At least one of these two attributes shall be included.
NOTE 2: Void.
NOTE 3: The scriptInput values are passed to the scripts in addition to the parameters received in the operation invocation request or indicator value change.

7.1.14 VnfInfoModifiableAttributes information element

7.1.14.1 Description

This information element defines the VNF-specific extension and metadata attributes of the VnfInfo that are writeable via the ModifyVnfInfo operation.
7.1.14.2 Attributes

The attributes of the VnfInfoModifiableAttributes information element shall follow the indications provided in table 7.1.14.2-1.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Qualifier</th>
<th>Cardinality</th>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>extension</td>
