Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, PLUGTESTS™, UMTS™ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. 3GPP™ and LTE™ are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. oneM2M™ logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. GSM® and the GSM logo are trademarks registered and owned by the GSM Association.

Foreword

This Group Report (GR) has been produced by ETSI Industry Specification Group (ISG) Network Functions Virtualisation (NFV).

Modal verbs terminology

In the present document "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.
1 Scope

The present document is an informative report defining the touchpoints/relations between the NFV Information Model ETSI GR NFV-IFA 015 [i.1] and information models from other organizations.

2 References

2.1 Normative references

Normative references are not applicable in the present document.

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] ETSI GR NFV-IFA 015: "Network Functions Virtualisation (NFV) Release 3; Management and Orchestration; Report on NFV Information Model”.

[i.2] Void.

[i.3] TM Forum GB922 R15.5.1: "TM Forum Information Framework".

NOTE: Available at https://www.opennetworking.org/software-defined-standards/models-apis/.

[i.5] ETSI TS 128 622: "Universal Mobile Telecommunications System (UMTS); LTE; 5G; Telecommunication management; Generic Network Resource Model (NRM) Integration Reference Point (IRP); Information Service (IS) (3GPP TS 28.622)".

[i.6] ETSI GR NFV 003: "Network Functions Virtualisation (NFV); Terminology for Main Concepts in NFV”.

[i.7] ETSI TS 128 541: “5G; Management and orchestration; 5G Network Resource Model (NRM); Stage 2 and stage 3 (3GPP TS 28.541)”.

[i.8] ETSI GS ZSM 002: "Zero-touch network and Service Management (ZSM); Reference Architecture”.

[i.9] ETSI GS ZSM 008: "Zero-touch Network and Service Management (ZSM); Cross-domain E2E Service Lifecycle Management”.
3 Definition of terms, symbols and abbreviations

3.1 Terms
For the purposes of the present document, the terms given in ETSI GR NFV 003 [i.6] apply.

3.2 Symbols
Void.

3.3 Abbreviations
For the purposes of the present document, the abbreviations given in ETSI GR NFV 003 [i.6] and the following apply:

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>E2E</td>
<td>End-to-End</td>
</tr>
<tr>
<td>MD</td>
<td>Management Domain</td>
</tr>
<tr>
<td>ZSM</td>
<td>Zero-touch network and Service Management</td>
</tr>
</tbody>
</table>

4 Overview

4.1 Introduction
The NFV Information Model, defined by ETSI GR NFV-IFA 015 [i.1], is focused on the management of the virtualisation aspects. Other models exist defined by other organizations and to provide an end-to-end model view, it is useful to be able to federate the NFV Information Model with other external models.

The approach used is to define interaction points between the NFV Information Model and some models from other organizations, allowing all organizations to extend their model based on the interaction points as they see needed.

The NFV Touchpoint Model, provided in annex A, only describes the touchpoints between various models.

The classes involved from each external model are defined in separate Papyrus models.

Both those external Papyrus models as well as the NFV Information Model are loaded as read-only in the NFV Touchpoint Model to create the needed relations between the models. This allows the NFV Information Model to remain independent of any external model.

4.2 Relation to other ETSI NFV ISG Specifications
The present document is referencing information from the following ISG NFV Group Specification:

- Network Function Virtualisation (NFV); Management and Orchestration; Report on NFV Information Model ETSI GR NFV-IFA 015 [i.1].
5 Touchpoints with external models

5.1 Touchpoints with ONF™ Core Model

For the current release of the NFV Information Model, the external Network Resource model is provided by the ONF™ Core Model [i.4].

The needed classes from the ONF™ Core Model are defined in the External Network Resource Model and are outside of ETSI NFV scope.

Figure 5.1-1 shows the touchpoints between the NFV Information Model and the External Network Resource Model at Virtualised Resource level.

Figure 5.1-2 shows the touchpoints between the NFV Information Model and the External Network Resource Model at Virtual Link level.
5.2 Touchpoints with TM Forum model

5.2.1 Touchpoints with TM Forum Service Model

For the current release of the NFV Information Model, the external Service Model is provided as a subset of the TM Forum Informational Framework [i.3] Service Model.

The needed classes are defined in the External Service Model and are outside of ETSI NFV scope.

Figure 5.2.1-1 shows the touchpoints between the NFV Information Model and the External Service Model.
5.2.2 Touchpoints with TM Forum Resource Model

For the current release of the NFV Information Model, the external Resource Model is provided as a subset of the TM Forum Informational Framework [i.3] Resource Model.

The needed classes are defined in the External Resource Model and are outside of ETSI NFV scope.

Figure 5.2.2-1 shows the touchpoints between the NFV Information Model and the External Resource Model.
5.3 Touchpoints with 3GPP Models

5.3.1 Touchpoints with 3GPP Generic Network Resource Model

For the current release of the NFV Information Model, the external Application Model is provided as a subset of the 3GPP Generic Network Resource Model [i.5]. The needed classes are defined in the External Application Model and are outside of ETSI NFV scope. Figure 5.3.1-1 shows the touchpoints between the NFV Information Model and the External Application Model.

![Figure 5.3.1-1: Touchpoints between NFV Information Model and External Application Model](image)

5.3.2 Touchpoints with 3GPP Network Slicing Model

For the current release of the NFV Information Model, the touchpoint to network slicing is defined according to ETSI TS 128 541 [i.7], in clause 6.2.1. The needed classes describing the network slices and subnets as well as the managed functions used for the slices are defined in 3GPP and thus outside of ETSI NFV scope. Figure 5.3.2-1 shows the touchpoints between the NFV Information Model and the Network Slicing Model.
5.4 Touchpoints with ETSI ISG ZSM

ETSI ISG ZSM provides an architecture for zero-touch automation of network and service management. In this architecture, ETSI NFV MANO can act as a Management Domain (MD). The concept of management domains is defined in ETSI GS ZSM 002 [1.8]. Figure 5.4-1 shows this relation in a simplified way, as defined in ETSI GS ZSM 008 [1.9], clause 4.

Figure 5.4-1: NFV MANO in the ETSI ZSM framework reference architecture
The NFV management domain here integrates to the E2E Service Management Domain or to an intermediate level management domain, which consumes parts of the NFV model exposed over the Os-Ma-nfvo reference point.

A detailed mapping can be found in clause 6.6 of ETSI GS ZSM 008 [i.9].
