

TP id	TTCN3-Semantic-Negative-xxxx
Test objective	Check that the TTCN3 tool rejects variable initialization with an expression of incompatible type.
Reference	ETSI ES 201 873-1 V4.1.1 section 11.1 clause a) p. 89
PICS Selection	<i>If I got it right - this section is for conditionals specified in PICS proforma I guess that STF may specify here whether implementation checks the referenced requirement at compile time or at run-time</i> ICS-yyyy
Initial conditions	
with { variable declared in control part }	
Expected behavior	
ensure that { when { ICS-yyyy specifies “at compile time” } then { the compiler rejects the TTCN3 script with error message describing type mismatch for the variable declaration } when { ICS-yyyy specifies “at runtime” } then { the compiler compiles the TTCN3 script script execution fails with run time error describing type mismatch for the line where } }	
Note:
