Our Adventure with eIDAS

- First time that it was recognized a function that we have done since 2007 with the registered sms and many services followed.
- We are not a CA (Certification Authority), we don't want to be a CA and we have many CAs as customers and we don't want to compete with them.
- We wanted to be one of the first ones in the next race.
- As always , we wanted to use KISS technology (Keep it Simple Stupid...)

Our Adventure with eIDAS

- We developed a new methodology, letting everyone to do it's own work. We have wonderful Qualified CA in many countries and many markets. Let's give them the opportunity to play it's role.
- We developed a Qualified CA proxy deployed in our network, managed by a Qualified CA who's in charge to verify the digital certificate presented by the destination customer to access the info

Our Adventure with eIDAS

Our Adventure with eIDAS

- We presented this methodology to become one of the first qualified E-delivery providers
- The greatest advantage is the ability to use the actual digital signature deployments and the actual Ecosystem
- Now in final process, probably we'll be the first in Spain and one of the very few in Europe
