**CCA has to be
part of the NLF
and it fit's fully in !!!**

The existing directives must be upgraded to include IT-Security, as a holistic risk assessment becomes indispensable.

Four Key Recommendations:

- 1. TÜV SÜD welcomes the Cybersecurity Act**
A certification framework will provide trust in the security of ICT products and services.
 - 2. Certification must always consider the risk of a product**
Specific risk defines depth and quality of the assessment. The higher the risk, the more comprehensive the assessment must be. Higher-risk products must be subject to a mandatory assessment.
 - 3. Certification only through a third party assessment**
The trustworthiness of a certificate is dependent on an assessment by an independent third-party body.
 - 4. Responsibilities needs to be clarified**
Interplay of independent conformity assessment, accreditation, notification, and national market surveillance provides effective and sustainable consumer protection. Various actors may only be responsible for one single role at a time.
