ECOS

Environmental Coalition on Standards

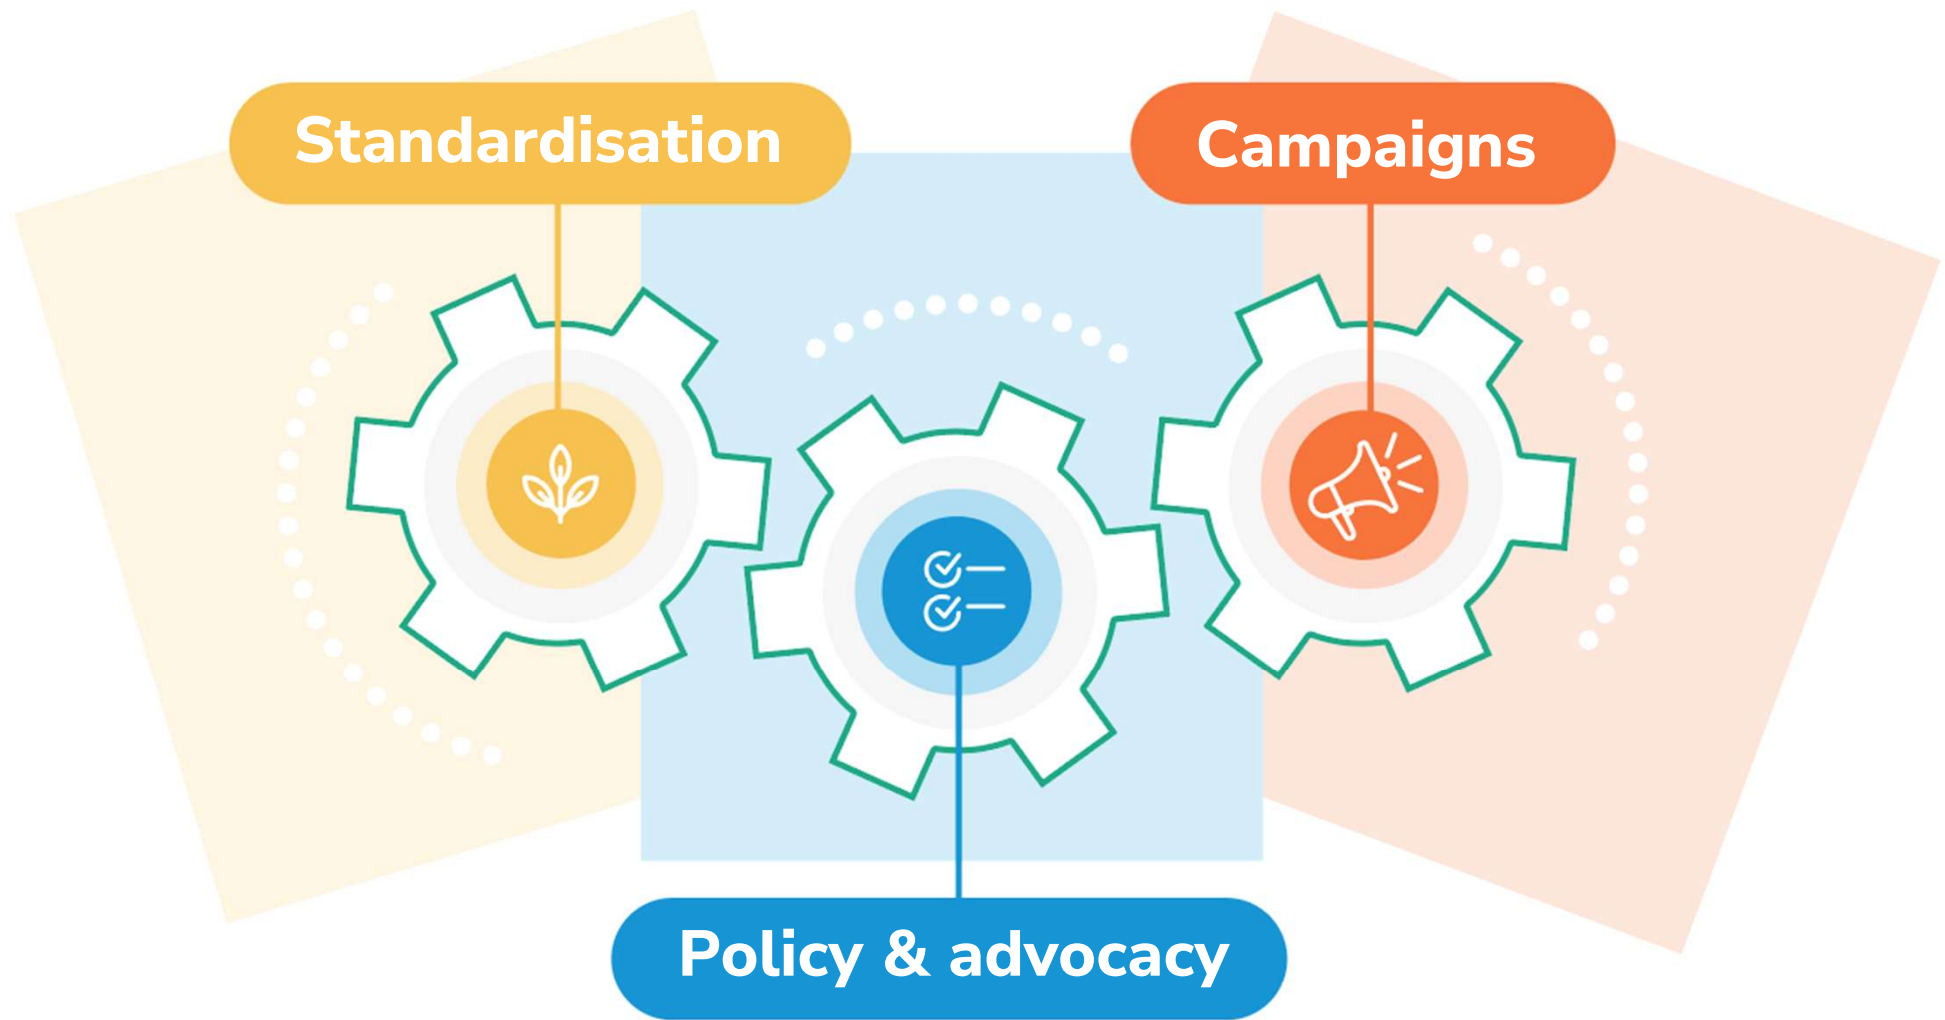

is an international NGO with a network of members and experts advocating for environmentally friendly technical standards, policies, and laws.

In a nutshell

The ECOS method – how do we work?

Our impact

The environmental voice in EU and International standardisation

EU Regulation (1025/2012) on standardisation
ANNEX III organisations

Slide 5

NRF0

I've reworked the note so that the references you make are accurate, also because inclusiveness and Annex III are currently a heated discussion at ETSI.
Note that the Regulation recognises the interests but not the organisations directly

Our impact

The environmental voice in EU and International standardisation

ECOS has a sit at:

*

*Application ongoing

ECOS is also involved in:

Sustainability for a Connected Future

What ECOS wants to achieve and how?

The global market provides enabling conditions for low environmental impact electronic products and batteries: ambitious standards, regulations and labels

Electronic products and batteries are the instruments of a fair digital transition

Through a life-cycle approach, advocating for standards, laws and ecolabels driving the global market towards sustainable electronic products and batteries with (in order of priority):

1. Electronic products and batteries that are long-lasting, repairable and energy efficient

2. Waste management prevents waste electronics

3. A reduced and better-quality extraction of minerals respecting environmental and social requirements

Our impact

Ecodesign as a tool for environmental change

Our impact

Environmentally sustainable by design

EN 4555X series

Our impact

**RIGHT TO
REPAIR**

Co-created
Since 2019

Fighting for Right to Repair

New approaches to digital impact

Impact of **services**, next to products

Consider **sufficiency**, next to efficiency

Address infrastructure, including **data centres**

Slide 11

NRF0

Would it not make sense to still have a slide on product standards supporting resource and material efficiency and the elements that you're working on? It's good to also mention whether or not the ongoing work is good or not, and then jump into this

NRF ECOS; 2023-03-23T17:02:02.525

NRF1

On your note you only tackle asks to regulators but given that this is ETSI it might be useful also to indeed set out some asks for standardisers

NRF ECOS; 2023-03-23T17:05:05.886

Thank you
