# SINGAPORE'S QUANTUM-SAFE COMMUNICATIONS INITIATIVES

Free space QKD across 1.5 km with entangled photon pairs

NUS-SingTel Cyber Security R&D to support QKD trials

Quantum nanosatellite SpooQy-1 deployed from ISS

Entanglement over Metro-Fibre Network

Entanglement demo on nano-satellite

ITU QKD Protocol Standard

SG's 1<sup>st</sup> local RS on QKD Networks

Entanglement-based QKD System

**Singapore launches Southeast Asia's first quantum-safe network infrastructure to help businesses tap on quantum-safe technologies**

\*Quantum Key Distribution (QKD)

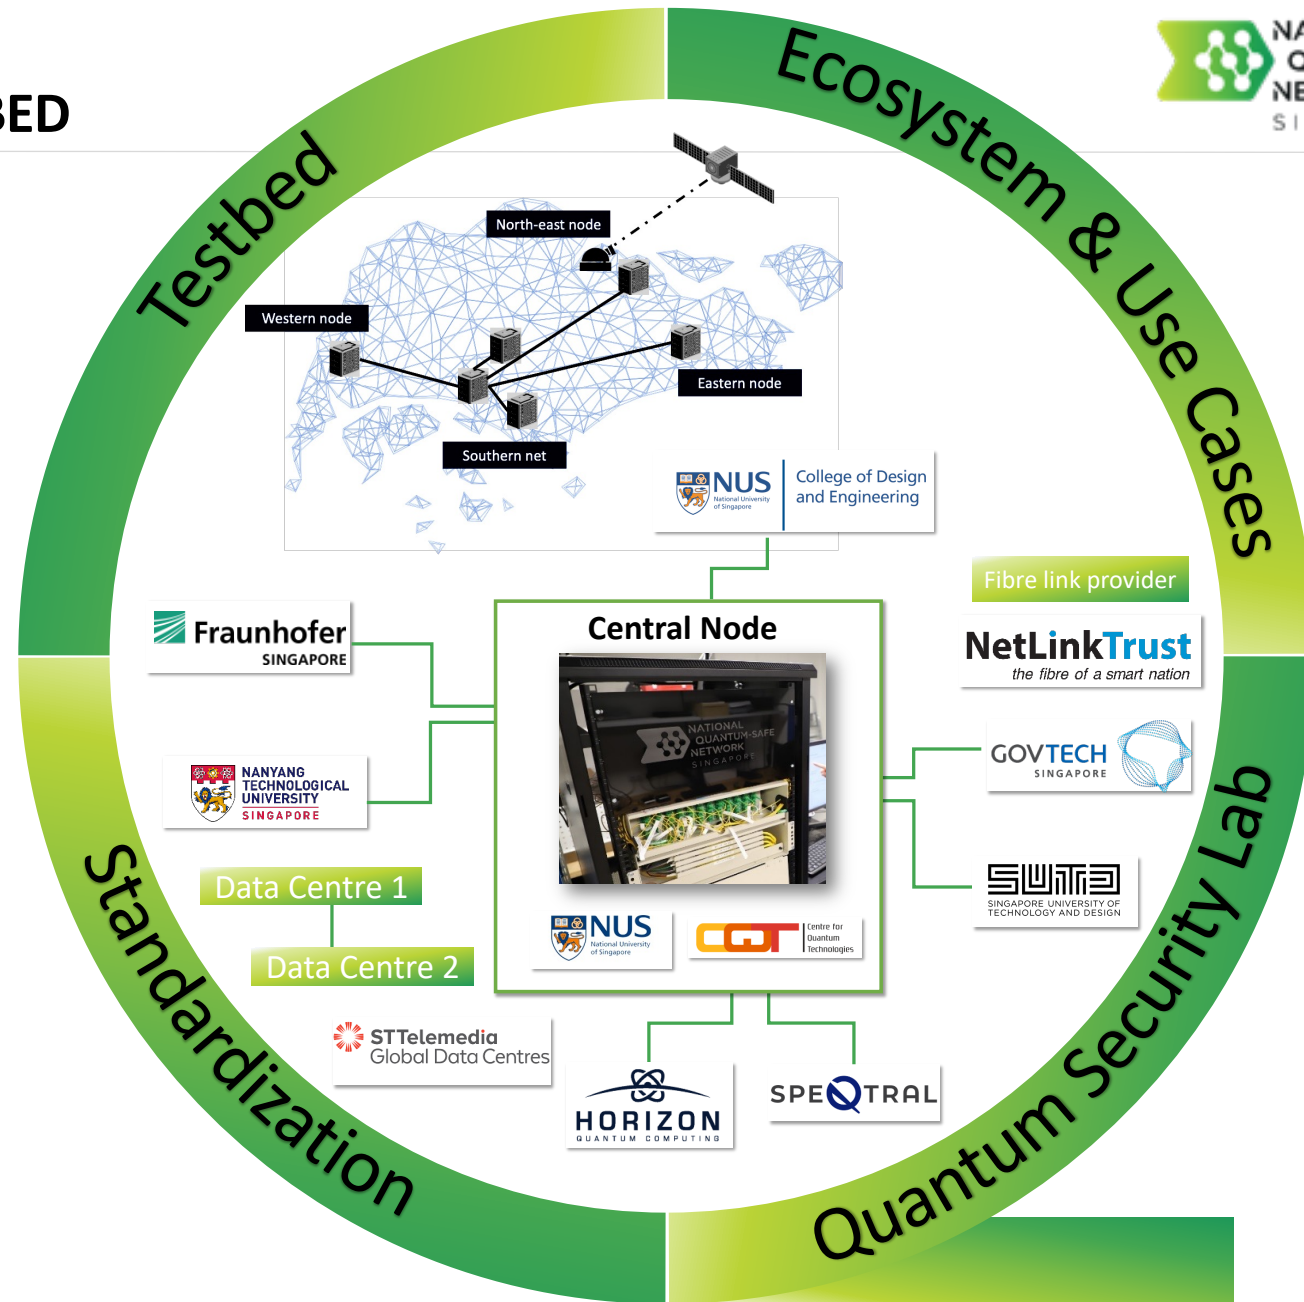

# QUANTUM-SAFE NETWORK TESTBED

## PILOT INFRASTRUCTURE

- ❖ Star-type Quantum Key Distribution (QKD) network topology
- ❖ Public-private collaborations with >20 companies & govt agencies
- ❖ **Vendor neutral and multiprotocol**
- ❖ Hybrid QKD/PQC (Post-quantum cryptography) approach

## SECURITY FRAMEWORK & GUIDELINES

- ❖ In-depth **functional & security evaluation** of Quantum-safe technologies to seed certification
- ❖ Build readiness by developing **national reference specifications**

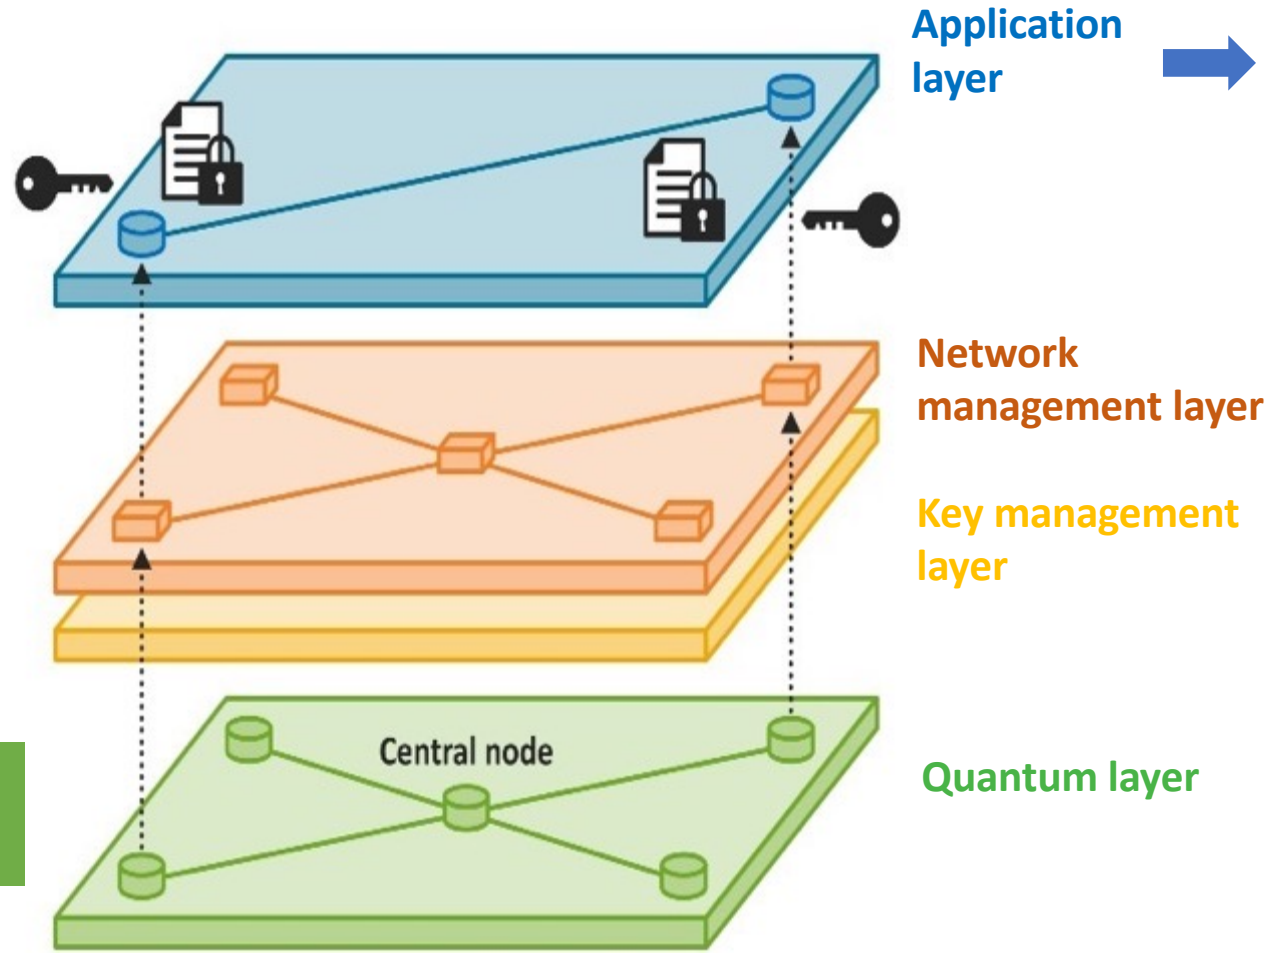

# TESTBED – DIFFERENT LAYERS IN NQSN

Encryptions & Quantum-Safe Applications

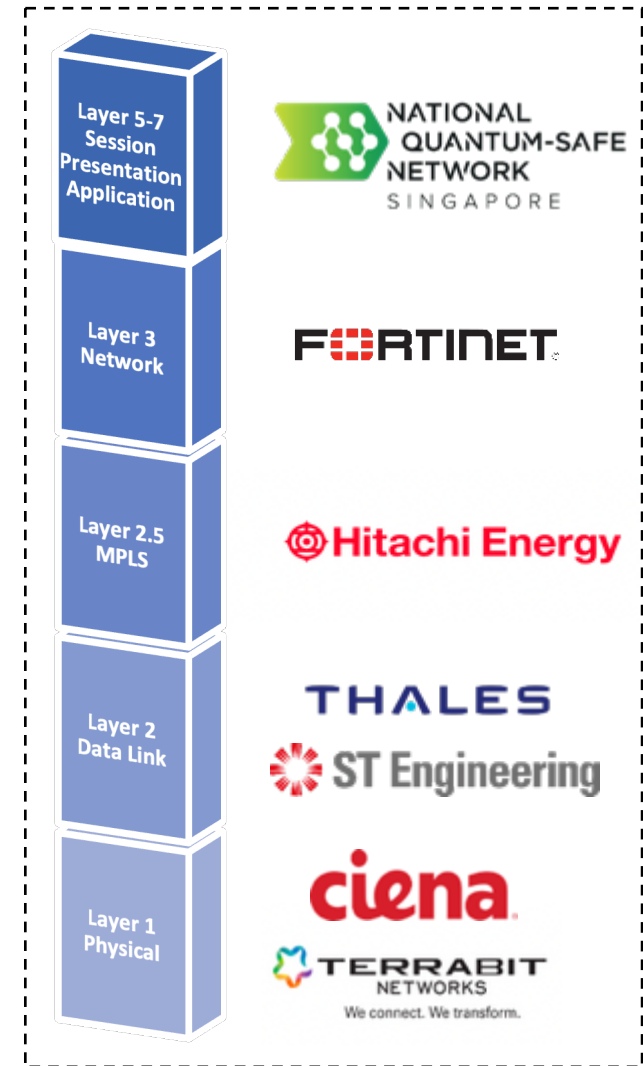

Interoperability  
Scalability

Multi QKD protocol  
Production-grade link

## Open Systems Interconnection (OSI) Layers

# TESTBED – QUANTUM LAYER

Prepare-&-Measure Discrete-Variable (DV) QKD

Prepare-&-Measure Continuous-Variable (CV) QKD

Entanglement-based (EB) QKD

\*From respective public websites. Non-exhaustive list

- Multi-protocol, vendor-neutral QKD network testbed
- Evaluation of DV & CV QKD protocols: BB84, COW, GMCS, BBM92 etc

# TESTBED – KEY MANAGEMENT & NETWORK MANAGEMENT LAYER

## Key Management Layer

- ❖ ITU-T and ETSI compliance
- ❖ **Interoperable** with different QKD providers
- ❖ Multi-input &-output key interface with high **scalability**
- ❖ Enable & integrated with PQC technology

## Network Management Layer

- ❖ A **centralized** network management on QKD Network (QKDN)
- ❖ Control Function:
  - ❖ Instructs the key delivery path across QKDN
  - ❖ Configure network components
- ❖ Management functions
  - ❖ **QKDN Telemetry**
  - ❖ **Fault detection & reporting**

# TESTBED – APPLICATIONS LAYER

- ✓ NQSN Quantum-safe software
  - One-Time Pad (OTP) & PQC secured data transfer
- ✓ Quantum-secured VPN
  - Fortinet Firewall L3 Appliances
- ✓ Quantum-secured **video surveillance**
  - Hitachi Energy L2.5 Hardware Encryptor
- GovTech **data link** quantum Encryption
  - ST Engineering L2 encryptor
- Quantum-encrypted **5G infrastructure**
  - Thales SENETAS L2 encryptor on SUTD 5G Testbed
- OTN Layer** quantum encryption
  - Ciena L1 hardware encryptor

NQSN OTP-PQC Software

Fortinet FGT-100F

Hitachi FOX615 Encryptor

Thales SENETAS

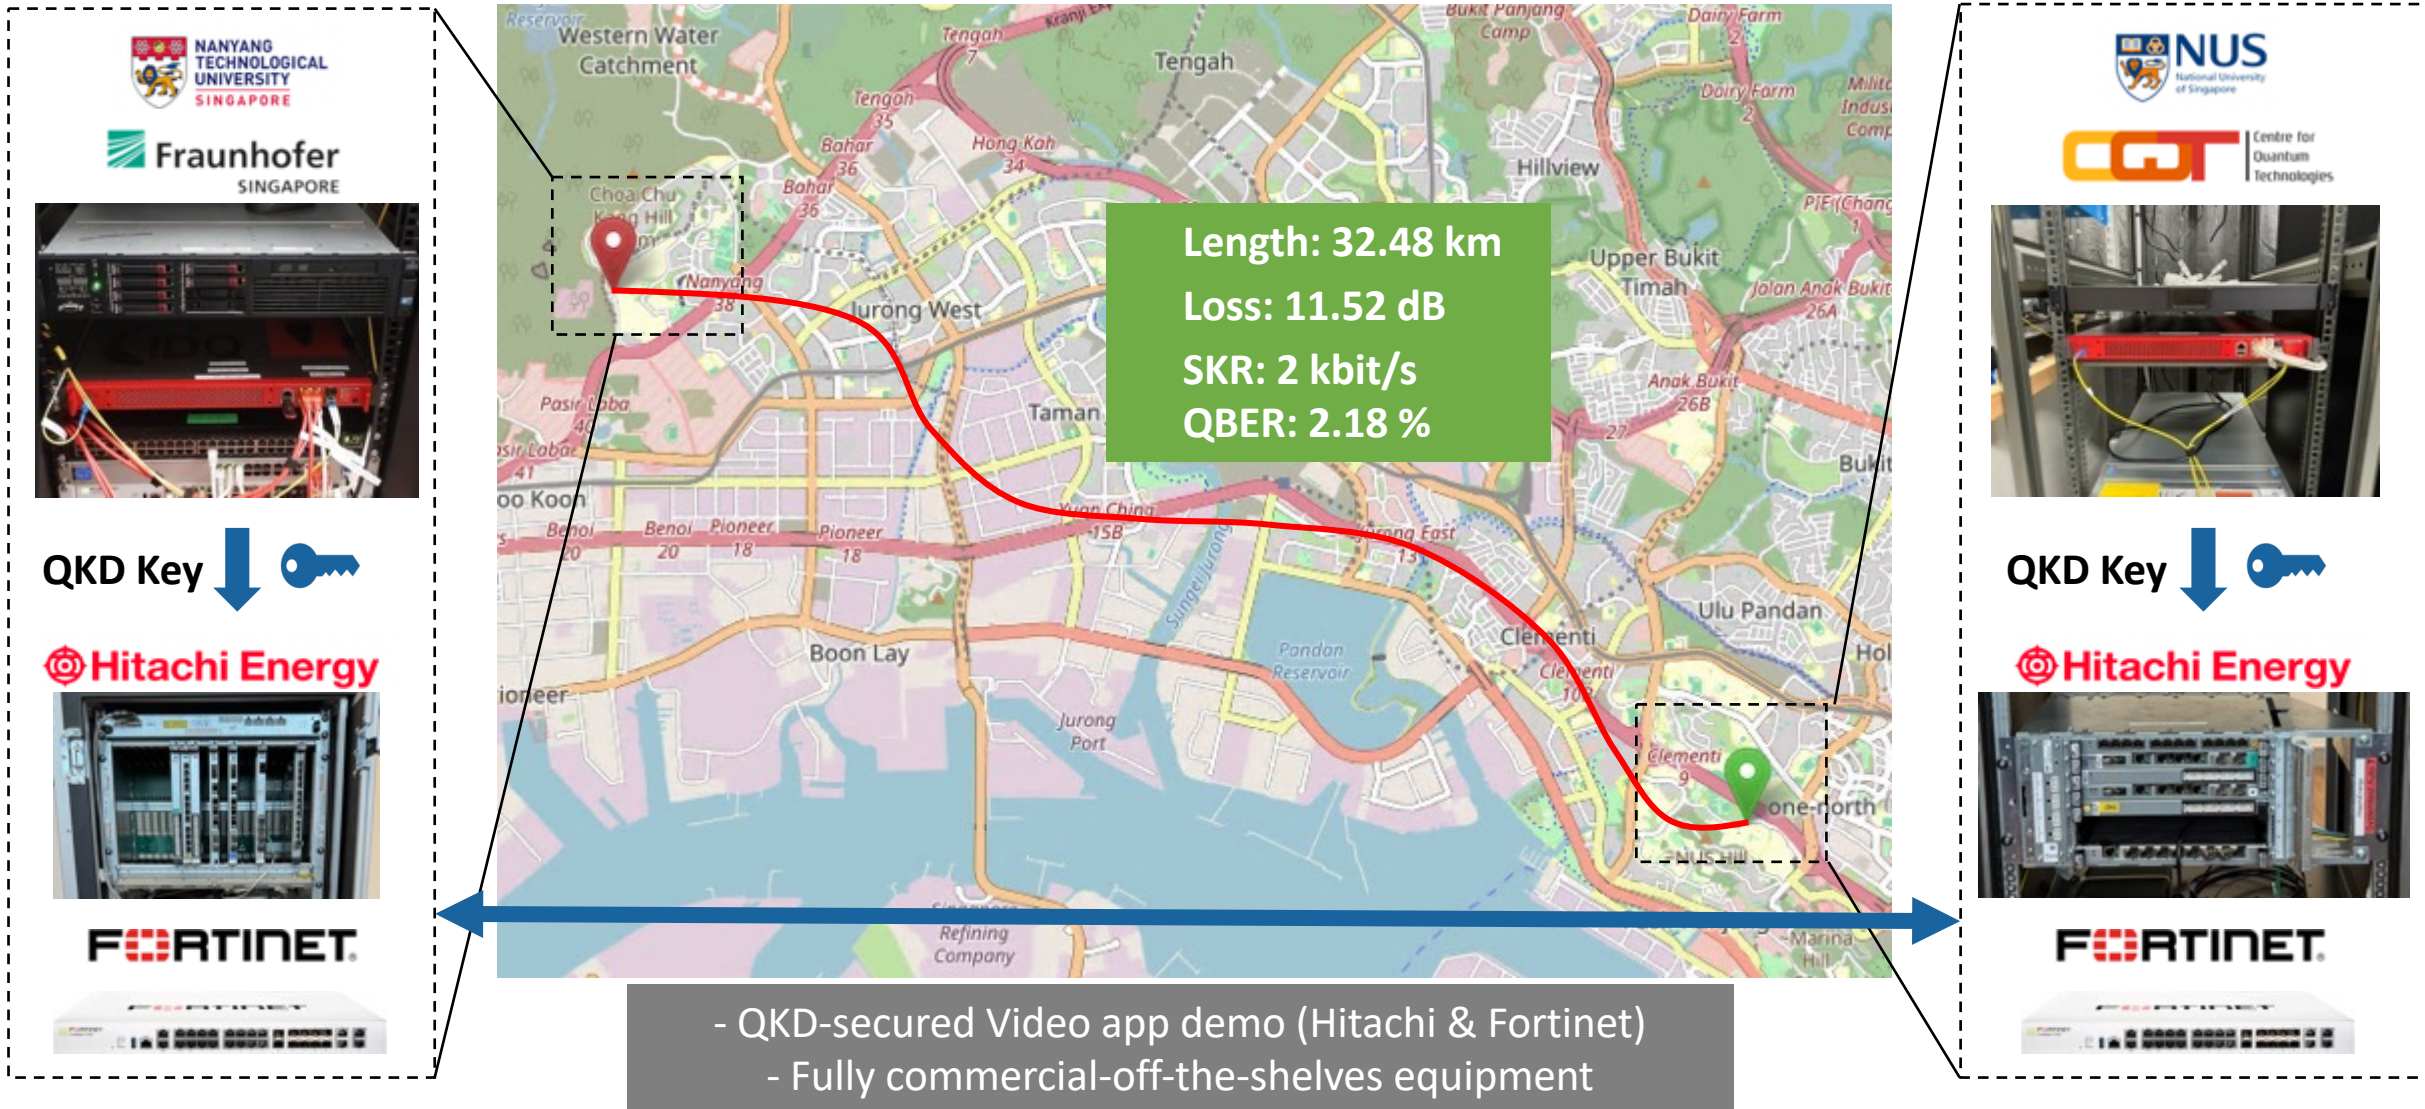

Ciena Waveserver 5

## OSI Layers

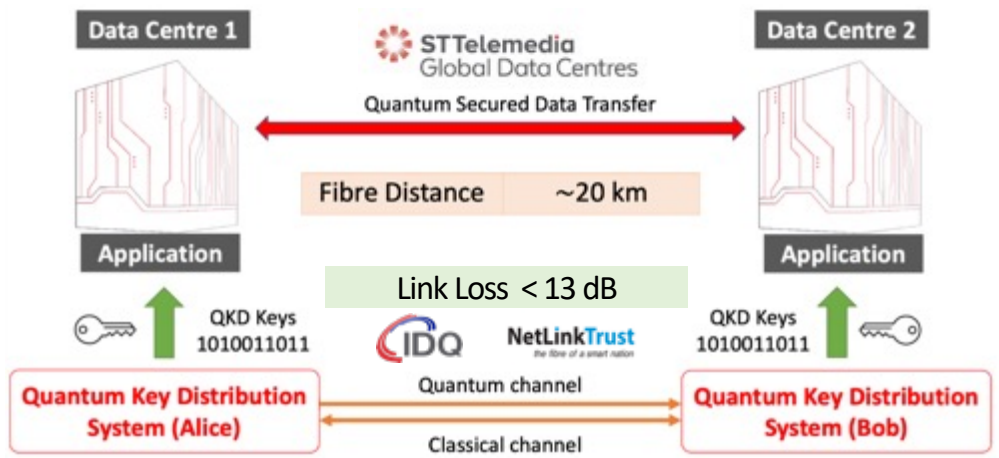

# USE CASES – QKD LINK IN NQSN TESTBED

# USE CASES – REFERENCE APPLICATIONS

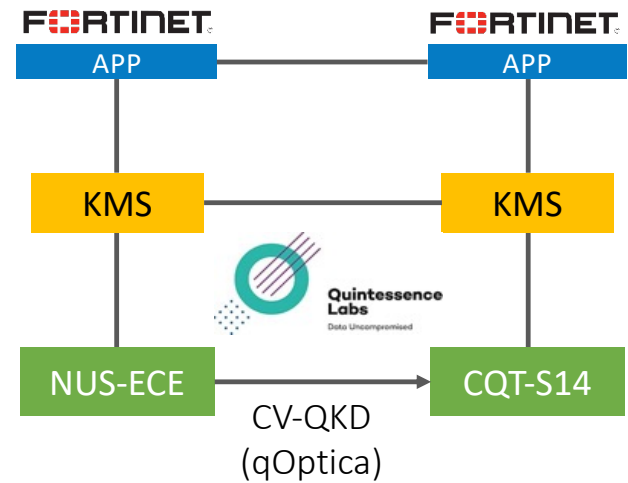

## QKD-secured Data Centre Interconnect (STT-GDC)

## Continuous-Variable QKD with Application (QLabs & Fortinet)

Secret Key Rate  
40 kb/s

## Quantum-Secured VPN (AWS-Fortinet-Horizon QC)

AWS Quantum  
Technologies Blog

## QKD over Diverse Fibre Network (SpeQtral-ST Eng-SpTel)

Presentation at Q2B 22

### SPTel, SpeQtral and ST Engineering Held Successful Trial for Quantum-Secure Networks to Enable Robustly Secure Digital Communications

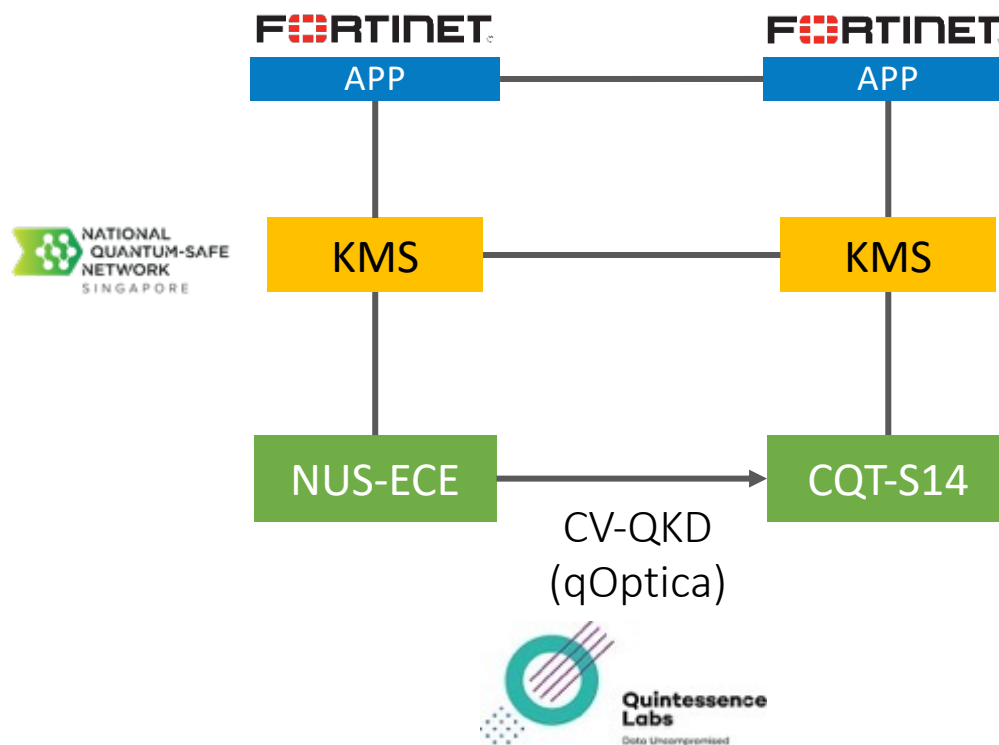

SINGAPORE – 10 November 2022 – SPTel and SpeQtral announced today their success on initial trials toward setting up Quantum-Secure Networks on SPTel's diverse fibre network, in the first among such trials in Singapore. SpeQtral conducted the trial using ST Engineering's quantum-enabled encryptors and Toshiba Digital Solutions' ("Toshiba") Quantum Key Distribution ("QKD") system over SPTel's diverse fibre network. The successful trial paves the way for robustly secure digital communications.

NQSN Advisory

# USE CASES – KEY MANAGEMENT SYSTEM & SOLUTIONS

## NQSN Key Management System

- ✓ KMS over 2 nodes with Fortinet L3 IPsec VPN

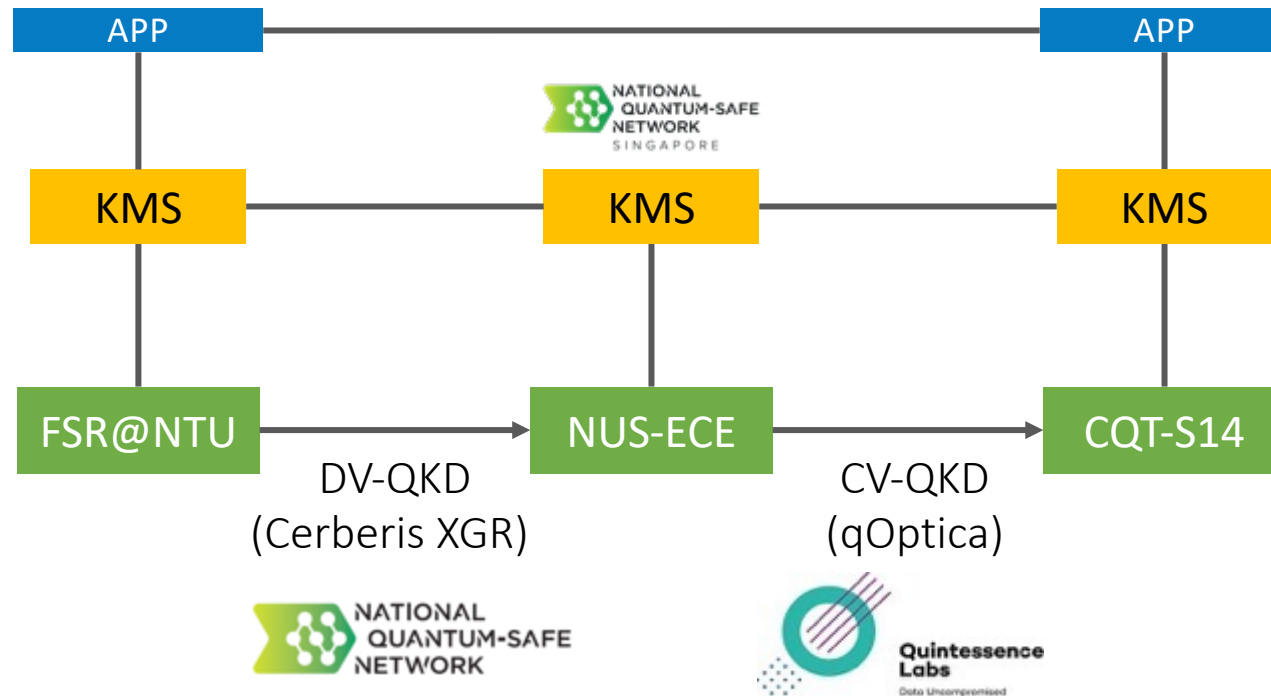

# USE CASES – KEY MANAGEMENT SYSTEM & TECHNOLOGIES

## NQSN Key Management System

QKD Encryption/Decryption Web App

QKD Encryption/Decryption Web App

- KMS over 2 nodes with Fortinet L3 IPsec VPN
- Key relay over 3 nodes with NQSN QKD-PQC Web Application

## Multi-hops, Multi Vendor KMS

Key Management layer

- Quantum Key Management for multi-hops (5 nodes), multi-vendor QKDs (DV, CV, EB, QKD Sim) with evolutionQ Basejump software

## Symmetric Key Distribution

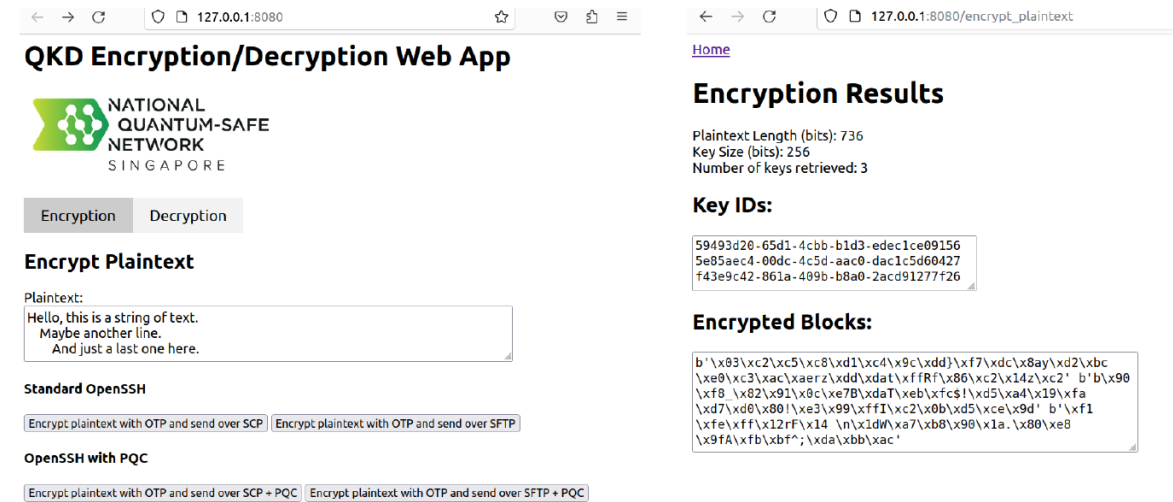

DSKE Protocol

- Distributed Symmetric Key Exchange (DSKE) Protocol on NQSN Testbed with Quantum Bridge software

# USE CASES – NQSN HYBRID QKD-PQC APPLICATION

## Hybrid Quantum Safe application

- Two-layer quantum safe encryption
- One Time Pad (OTP) encryption with QKD keys plus Quantum-safe OPEN-SSH\*
- Kyber for key exchange (NIST Post quantum cryptography standard selection) + AES encryption
- For short messages & high confidentiality use cases

# STANDARDISATION – INTERNATIONAL & LOCAL???

**ITU** **ETSI**

[2022-2024] : [SG17] : [Q15/17]  
 [Declared patent(s)] - [Associated work]

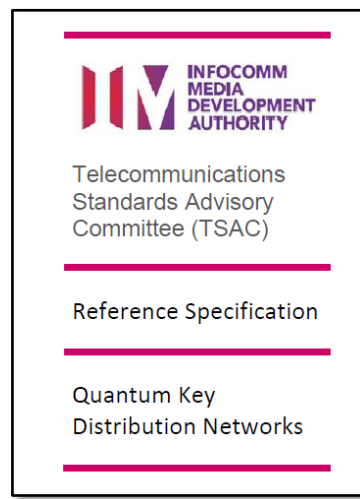

Work item: X\_sec\_QKD\_profi  
 Subject title: Framework of quantum key distribution (QKD) protocols in QKD network  
 Status: Under study  
 Approval process: AAP  
 Type of work item: Recommendation  
 Version: New  
 Equivalent number: -  
 Timing: 2025-03 (Medium priority)  
 Liaison: SG11, SG13, ISO/IEC JTC1-SC27 WG3, ETSI ISG-QKD  
 Supporting members: Germany, Singapore (Republic of), CAS Quantum Network Co. Ltd., ID Quantique, NICT, QuantumCTek Co., Ltd., SK Telecom, National University of Singapore

IMDA's NQSN+ will advance Singapore's vision of a quantum-safe nation in the next ten years.

IMDA partners NQSN to co-lead the first standardisation of the QKD protocol framework at the International Telecommunication Union together with Japan.

IMDA has also signed a MoU with South Korea's NIA to build bilateral cooperations in quantum technologies between the two countries.

SINGAPORE - 06 JUN 2023

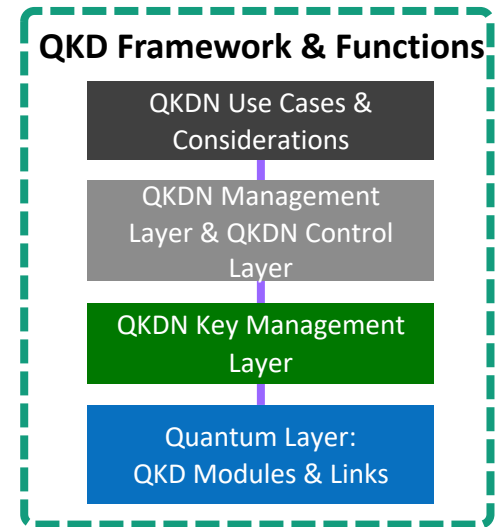

INFOCOMM MEDIA DEVELOPMENT AUTHORITY

Telecommunications Standards Advisory Committee (TSAC)

Reference Specification

Quantum Key Distribution Networks

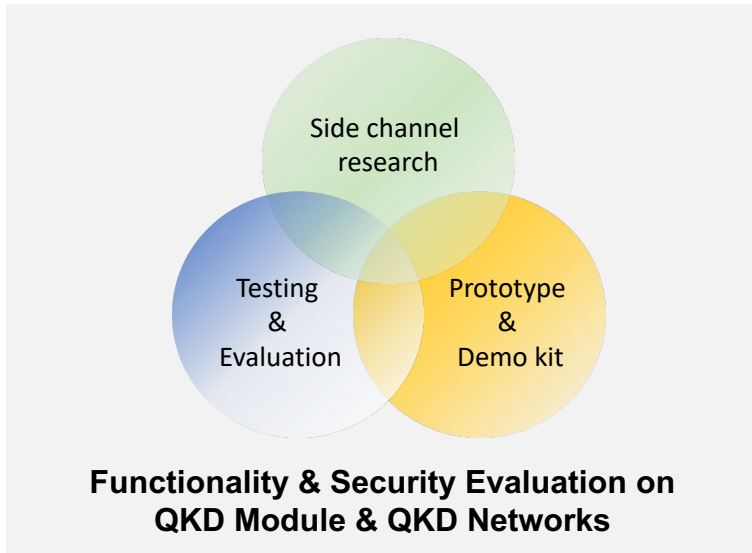

- ❑ **International standards**
  1. Led and established the work item for **1<sup>st</sup> standard on QKD protocol framework** in ITU-T
  2. Hosted ITU-T Q15/17 interim meetings in 2022/2023
  3. Contributed to ETSI ISG QKD, e.g. GR QKD 017
  4. Co-hosting\* **10<sup>th</sup> ETSI/IQC Quantum-Safe Workshop in May 2024 in Singapore, GSMA PQTN & ITU-T Joint Coordination Activity on QKD Network Meeting**

\* In partnership with IMDA & CSA

- ❑ **Local standards**
  1. IMDA TSAC **Quantum Communications Network Task Force**, with chairs & editors from NQSN, consolidated the contributions from 20 partners
  2. Singapore's **1<sup>st</sup> standard (Reference Specification) on QKD Networks** published, with high level descriptions of QKDN & aligned with SDOs on QKDN, e.g. ITU-T, ETSI
  3. QCNTF 2<sup>nd</sup> phase study on QKD modules & networks **evaluation & certification**
