Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, PLUGTESTS™, UMTS™ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. 3GPP™ and LTE™ are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. oneM2M™ logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. GSM® and the GSM logo are trademarks registered and owned by the GSM Association.

Foreword

This Group Specification (GS) has been produced by ETSI Industry Specification Group (ISG) Multi-access Edge Computing (MEC).

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.
1 Scope

The present document specifies the enablement APIs produced by MEO over Mm1 reference point to support customer self-service portal. This includes the related aspects on tenant management, per tenant application management, per tenant resource management, basic monitoring per tenant, per tenant accounting capabilities. It describes the information flows, required information, and specifies the necessary operations, data models and API definitions with example codes.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at https://docbox.etsi.org/Reference/.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

[1] ETSI GS MEC 009: "Multi-access Edge Computing (MEC); General principles, patterns and common aspects of MEC Service APIs".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] ETSI GR MEC 001: "Multi-access Edge Computing (MEC); Terminology".

[i.2] IETF RFC 4122: "A Universally Unique IDentifier (UUID) URN Namespace".

[i.3] OpenAPI™ Specification.

3 Definition of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the terms given in ETSI GR MEC 001 [i.1] and the following apply.

tenant: a user who shares the access to the resources (e.g. a set of physical, virtual or service resources) in a private or public environment that is isolated from other users.
NOTE: a tenant in MEC can be associated with an enterprise customer who has an account with the MEC system provider. Such enterprise customer may be associated with one or multiple tenants in a MEC system.

3.2 Symbols
Void.

3.3 Abbreviations
For the purposes of the present document, the abbreviations given in ETSI GR MEC 001 [i.1] and the following apply.

CSE Customer Self-service Enablement

4 Overview

The present document specifies the Customer Self-service Enablement (CSE) APIs over Mm1 reference point in order to support customer self-service portal.

Clause 5 introduces the functionalities enabled by CSE APIs and how the CSE services may be used by a service consumer. It provides the high-level information flows and describes the necessary operations.

The information that can be exchanged over the CSE APIs is described in clause 6 which defines detailed data models with description on all information elements.

Clause 7 specifies the CSE APIs providing detailed information how information elements are mapped into a RESTful API design.

The informative OpenAPI definitions are provided in clause 8 to illustrate the usage of the defined data model.

5 Description of the services (informative)

5.1 Introduction

A self-service portal is the customer facing part of the IT service management tool. In the context of MEC, self-service portals provide customers quick and easy access to the various services and resources offered by the MEC system. The CSE services are intended to support customer self-service portal, enabling simple application management and basic tenant, resource management capabilities.

Via Mm1 reference point the CSE APIs enable the basic functions, including:

- Tenant management:
  - creation of tenant resource,
  - deletion of tenant resource,
  - updating tenant resource, and
  - querying tenant resource.

- Computing resource management:
  - per tenant resource request in an edge site or in a MEC system,
  - per tenant resource request update in an edge site or in a MEC system, and
  - per tenant resource quota query in an edge site or in a MEC system.

- REST based subscribe-notify model:
- subscribing to CSE event notifications,
- receiving notifications on subscribed CSE events,
- updating subscription for CSE event notifications, and
- unsubscribing from CSE event notifications.

5.2 Sequence diagrams

5.2.1 General

The following clauses describe how the CSE services can be used by a service consumer via Mm1 reference point. The related sequence diagrams are presented.

5.2.2 Tenant management

5.2.2.1 Introduction

In the context of the present document, a tenant typically is associated with an enterprise customer who has an account with the MEC system provider. The basic functionalities for tenant management include:

- tenant resource creation,
- tenant resource deletion,
- tenant resource update, and
- tenant resource query.

5.2.2.2 Tenant resource creation

Figure 5.2.2.2-1 shows a scenario where a service consumer requests to create a tenant resource.

![Diagram](image)

**Figure 5.2.2.2-1: Flow of tenant resource creation**

Tenant resource creation, as illustrated in figure 5.2.2.2-1, consists of the following steps:

1) Service consumer sends a request to the CSE to create a tenant resource with the associated information.

2) CSE returns "201 Created" with the message body including the accepted TenantInfo structure.

5.2.2.3 Tenant resource deletion

Figure 5.2.2.3-1 shows a scenario where a service consumer requests to delete a tenant resource.
Tenant resource deletion, as illustrated in figure 5.2.2.3-1, consists of the following steps:

1) Service consumer sends a request to the CSE to delete a tenant resource.
2) CSE responds with "204 No content".

5.2.2.4 Tenant resource update

Figure 5.2.2.4-1 shows a scenario where a service consumer requests to update the information of a tenant resource.

Tenant resource update, as illustrated in figure 5.2.2.4-1, consists of the following steps:

1) Service consumer requests the CSE to update the information of a tenant resource by sending a PUT request with the modified data structure specific to that tenant resource.
2) CSE responds with "200 OK" with the message body containing the accepted data structure specific to that tenant resource.

5.2.2.5 Tenant resource query

Figure 5.2.2.5-1 shows a scenario where a service consumer requests to query the information of a specific tenant resource.
Querying a specific tenant resource, as illustrated in figure 5.2.2.5-1, consists of the following steps:

1) Service consumer requests the CSE to query the information of a specific tenant resource.
2) CSE responds with "200 OK" with the message body containing the information of that tenant resource.

Figure 5.2.2.5-2 shows a scenario where a service consumer requests to query the information of all tenant resources.

Figure 5.2.2.5-2: Flow of querying all tenant resources

Querying all tenant resources, as illustrated in figure 5.2.2.5-2, consists of the following steps:

1) Service consumer requests the CSE to query the information of all tenant resources.
2) CSE responds with "200 OK" with the message body containing the information of a list of tenant resources.

5.2.3 Computing resource management

5.2.3.1 Introduction

The computing resource management is about the resource information in an edge site or a MEC system that is associated with a tenant, and the basic functionalities include:

- per tenant resource request in an edge site,
- per tenant resource request update in an edge site,
- per tenant resource quota query in an edge site,
- per tenant resource request in a MEC system,
- per tenant resource request update in a MEC system, and
- per tenant resource quota query in a MEC system.

5.2.3.2 Computing resource request (per-tenant)

Figure 5.2.3.2-1 shows a scenario where a service consumer requests computing resource for a tenant. It is used to request the computing resource in a MEC system or an edge site that can be used for a tenant.
5.2.3.2 Computing resource request (per-tenant)

Per-tenant computing resource request, as illustrated in Figure 5.2.3.2-1, consists of the following steps:

1) Service consumer sends a message to the CSE requesting the computing resource quota for a tenant:
   - Case 1: requesting computing resource in a MEC system
   - Case 2: requesting computing resource in an edge site

2) CSE returns "201 Created" with the message body including the granted computing resource quota:
   - Case 1: the data structure resourceQuotaInfo is returned
   - Case 2: the data structure siteResourceQuotaInfo is returned

5.2.3.3 Computing resource request update (per-tenant)

Figure 5.2.3.3-1 shows a scenario where a service consumer requests to update the computing resource request for a tenant. It is used to update the request of the computing resource in a MEC system or an edge site that can be used for a tenant.
Computing resource request update, as illustrated in figure 5.2.3.3-1, consists of the following steps:

1) Service consumer requests the CSE to update the computing resource request for a tenant by sending a PUT request with the modified data structure specific to that computing resource request for a tenant:
   
   Case 1: updating the request of computing resource in a MEC system
   Case 2: updating the request of computing resource in an edge site

2) CSE responds with “200 OK” with the message body containing the accepted data structure:
   
   Case 1: the data structure resourceQuotaInfo is returned
   Case 2: the data structure siteResourceQuotaInfo is returned

5.2.3.4 Computing resource quota query (per tenant)

Figure 5.2.3.4-1 shows a scenario where a service consumer requests to query the computing resource quota for a specific tenant. It is used to query the per-tenant quota of the computing resource in a MEC system or an edge site.

Figure 5.2.3.4-1: Flow of querying the computing resource quota

Querying the per-tenant quota of the computing resource, as illustrated in figure 5.2.3.4-1, consists of the following steps:

1) Service consumer requests the CSE to query the computing resource quota for a specific tenant:
   
   Case 1: query the per-tenant quota of the computing resource in a MEC system
   Case 2: query the per-tenant quota of the computing resource in an edge site

2) CSE responds with “200 OK” with the message body containing the requested information:
   
   Case 1: the data structure resourceQuotaInfo is returned
   Case 2: the data structure siteResourceQuotaInfo is returned

5.2.4 REST based subscribe-notify model

5.2.4.1 Subscribing to CSE event notifications

To receive notifications on selected events, the service consumer creates a subscription to certain specific event that is available. Figure 5.2.4.1-1 shows a scenario where the service consumer uses REST based procedures to create a subscription for CSE event notifications.
Subscribing to the CSE event notifications, as illustrated in Figure 5.2.4.1-1, consists of the following steps.

When the service consumer wants to receive CSE event notifications, it creates a subscription:

1) The service consumer sends a POST request with the message body containing the \{NotificationSubscription\} data structure.

2) CSE sends "201 Created" response with the message body containing the data structure specific to that CSE event subscription.

### 5.2.4.2 Receiving notification on expiry of CSE event subscription

CSE may define an expiry time for the CSE event subscription. In case expiry time is used, the time will be included in the \{NotificationSubscription\} data structure that is included in the response message to the subscription. Prior the expiry, CSE will also send a notification to the service consumer that owns the subscription.

Figure 5.2.4.2-1 shows a scenario where the service consumer receives a subscription expiry notification for the existing subscription.

Sending a notification on expiry of the subscription, as illustrated in Figure 5.2.4.2-1 consists of the following steps. If CSE has defined an expiry time for the subscription, CSE will send a notification prior the expiry:

1) CSE sends a POST request to the callback reference address included by the service consumer in the subscription request. The POST request contains a data structure ExpiryNotification.

2) Service consumer sends a "204 No Content" response.

### 5.2.4.3 Updating subscription for CSE event notifications

Figure 5.2.4.3-1 shows a scenario where the service consumer needs to update an existing subscription for a CSE event notification. The subscription update is triggered e.g. by the need to change the existing subscription, or due to the expiry of the subscription.
5.2.4.3 Updating subscription for CSE event notifications

Updating subscription for CSE event notifications, as illustrated in Figure 5.2.4.3-1, consists of the following steps.

When the service consumer needs to modify an existing subscription for CSE event notifications, it can update the corresponding subscription as follows:

1) Service consumer updates the subscription resource by sending a PUT request to the resource containing all the subscription information with the modified data structure specific to that CSE event subscription.

2) CSE returns ”200 OK” with the message body containing the accepted data structure specific to that CSE event subscription.

5.2.4.4 Unsubscribing from CSE event notifications

When the service consumer does not want to receive notifications anymore after subscribing to CSE events, the service consumer unsubscribes from the CSE event notifications. Figure 5.2.4.4-1 shows a scenario where the service consumer uses REST based procedures to delete the subscription for CSE event notifications.

Unsubscribing from the CSE event notifications, as illustrated in Figure 5.2.4.4-1, consists of the following steps.

When the service consumer does not want to receive the notifications anymore, it can unsubscribe from the CSE notification events by deleting the subscription:

1) Service consumer sends a DELETE request to the resource representing the CSE event subscription that was created.

2) CSE sends ”204 No content” response.
5.2.5 Receiving CSE event notifications about resource usage in a MEC system

Figure 5.2.5-1 presents the scenario where the CSE sends to the service consumer CSE event notifications about the computing resource usage of a tenant in a MEC system.

1) CSE sends a POST request with the message body containing the ResourceUsageNotification data structure to the callback reference address included by the service consumer in the CSE event subscription.

2) Service consumer sends a "204 No Content" response to the CSE.

5.2.6 Receiving CSE event notifications about resource usage in edge sites

Figure 5.2.6-1 presents the scenario where the CSE sends to the service consumer CSE event notifications about the computing resource usage of a tenant in one or multiple edge sites.
Receiving CSE event notifications on resource usage in edge sites, as illustrated in Figure 5.2.6-1, consists of the following steps:

1) CSE sends a POST request with the message body containing the SiteResourceUsageNotification data structure to the callback reference address included by the service consumer in the CSE event subscription.

2) Service consumer sends a "204 No Content" response to the CSE.

6 Data model

6.1 Introduction

The following clauses define the description of the data model.

6.2 Resource data types

6.2.1 Overview

This clause defines data structures that shall be used in resource representations.

6.2.2 Type: TenantInfo

This type represents the information on a tenant.

The attributes of the TenantInfo shall follow the notations provided in table 6.2.2-1.

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>customerId</td>
<td>String</td>
<td>1</td>
<td>Identifier of the customer. For the uniqueness of the identifier across the MEC system, UUID format [i.2] is recommended.</td>
</tr>
</tbody>
</table>
6.2.3 Type: ResourceQuotaInfo

This type represents the information on the computing resource quota for a tenant in a MEC system.

The attributes of the ResourceQuotaInfo shall follow the notations provided in Table 6.2.3-1.

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cpuQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed number of CPUs in the MEC system that can be used by the tenant.</td>
</tr>
<tr>
<td>memoryQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed amount of memory (MB) in the MEC system that can be used by the tenant.</td>
</tr>
<tr>
<td>diskQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed amount of disk (GB) in the MEC system that can be used by the tenant.</td>
</tr>
</tbody>
</table>

NOTE: At least one of cpuQuota, memoryQuota and diskQuota shall be present.

6.2.4 Type: SiteResourceQuotaInfo

This type represents the information on the computing resource quota for a tenant in an edge site.

The attributes of the SiteResourceQuotaInfo shall follow the notations provided in Table 6.2.4-1.

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>siteId</td>
<td>String</td>
<td>1</td>
<td>Identifier of an edge site. For the uniqueness of the identifier across the MEC system, UUID format [1.2] is recommended.</td>
</tr>
<tr>
<td>cpuQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed number of CPUs in the edge site that can be used by the tenant.</td>
</tr>
<tr>
<td>memoryQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed amount of memory (MB) in the edge site that can be used by the tenant.</td>
</tr>
<tr>
<td>diskQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed amount of disk (GB) in the edge site that can be used by the tenant.</td>
</tr>
</tbody>
</table>

NOTE: At least one of cpuQuota, memoryQuota and diskQuota shall be present.

6.3 Subscription data types

6.3.1 Introduction

This clause defines data structures for subscriptions.
6.3.2 Type: ResourceUsageSubscription

This type represents a subscription to get updates on the computing resource usage of a tenant in a MEC system.

Table 6.3.2-1: Attributes of the ResourceUsageSubscription

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>subscriptionType</td>
<td>String</td>
<td>1</td>
<td>Shall be set to &quot;ResourceUsageSubscription&quot;.</td>
</tr>
<tr>
<td>callbackReference</td>
<td>Uri</td>
<td>0..1</td>
<td>URI exposed by the client on which to receive notifications via HTTP.</td>
</tr>
<tr>
<td>requestTestNotification</td>
<td>Boolean</td>
<td>0..1</td>
<td>Set to TRUE by the service consumer to request a test notification via HTTP.</td>
</tr>
<tr>
<td>websocketNotifConfig</td>
<td>WebsockNotifConfig</td>
<td>0..1</td>
<td>Provides details to negotiate and signal the use of a Websocket connection between the WAIS and the service consumer for notifications.</td>
</tr>
<tr>

</table>
6.4 Notifications data types

6.4.1 Introduction

This clause defines data structures that define notifications.

6.4.2 Type: ResourceUsageNotification

This type represents a notification from CSE with regards to the computing resource usage of a tenant in a MEC system.

The attributes of the ResourceUsageNotification shall follow the indications provided in Table 6.4.2-1.

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>notificationType</td>
<td>String</td>
<td>1</td>
<td>Shall be set to “ResourceUsageNotification”.</td>
</tr>
<tr>
<td>timeStamp</td>
<td>TimeStamp</td>
<td>0..1</td>
<td>Time stamp.</td>
</tr>
<tr>
<td>customerId</td>
<td>String</td>
<td>1</td>
<td>Identifier to uniquely specify the customer for the subscription.</td>
</tr>
<tr>
<td>tenantId</td>
<td>String</td>
<td>1</td>
<td>Identifier of the tenant.</td>
</tr>
<tr>
<td>resourceUseInfo</td>
<td>Structure (inlined)</td>
<td>1</td>
<td>Resource usage in the MEC system by the tenant.</td>
</tr>
<tr>
<td>cpuUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used number of CPUs by the tenant.</td>
</tr>
<tr>
<td>cpuRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining number of CPUs that can be used by the tenant.</td>
</tr>
<tr>
<td>memoryUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used amount of memory (MB) by the tenant.</td>
</tr>
<tr>
<td>memoryRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining amount of memory (MB) that can be used by the tenant.</td>
</tr>
<tr>
<td>diskUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used amount of disk (GB) by the tenant.</td>
</tr>
<tr>
<td>diskRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining amount of disk (GB) that can be used by the tenant.</td>
</tr>
</tbody>
</table>

NOTE: The corresponding resource usage information shall be included based on the subscription.

6.4.3 Type: SiteResourceUsageNotification

This type represents a notification from CSE with regards to the computing resource usage of a tenant in one or multiple edge sites.

The attributes of the SiteResourceUsageNotification shall follow the indications provided in Table 6.4.3-1.

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>notificationType</td>
<td>String</td>
<td>1</td>
<td>Shall be set to “SiteResourceUsageNotification”.</td>
</tr>
<tr>
<td>timeStamp</td>
<td>TimeStamp</td>
<td>0..1</td>
<td>Time stamp.</td>
</tr>
<tr>
<td>customerId</td>
<td>String</td>
<td>1</td>
<td>Identifier to uniquely specify the customer for the subscription.</td>
</tr>
<tr>
<td>tenantId</td>
<td>String</td>
<td>1</td>
<td>Identifier of the tenant.</td>
</tr>
<tr>
<td>resourceUseInfo</td>
<td>Structure (inlined)</td>
<td>1..N</td>
<td>Resource usage in the edge sites by the tenant.</td>
</tr>
<tr>
<td>siteId</td>
<td>String</td>
<td>1</td>
<td>Identifier of an edge site.</td>
</tr>
<tr>
<td>cpuUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used number of CPUs by the tenant.</td>
</tr>
<tr>
<td>cpuRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining number of CPUs that can be used by the tenant.</td>
</tr>
<tr>
<td>memoryUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used amount of memory (MB) by the tenant.</td>
</tr>
<tr>
<td>memoryRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining amount of memory (MB) that can be used by the tenant.</td>
</tr>
<tr>
<td>diskUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used amount of disk (GB) by the tenant.</td>
</tr>
<tr>
<td>diskRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining amount of disk (GB) that can be used by the tenant.</td>
</tr>
</tbody>
</table>

NOTE: The corresponding resource usage information shall be included based on the subscription.

6.4.4 Type: ExpiryNotification

This type represents a notification from CSE with regards to expiry of an existing subscription.

The Notification is sent by the CSE about expiry of a subscription.
Table 6.4.4-1: Attributes of the ExpiryNotification

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>notificationType</td>
<td>String</td>
<td>1</td>
<td>Shall be set to “ExpiryNotification”.</td>
</tr>
<tr>
<td>_links</td>
<td>Structure (inlined)</td>
<td>1</td>
<td>Hyperlink related to the resource.</td>
</tr>
<tr>
<td>&gt;subscription</td>
<td>LinkType</td>
<td>1</td>
<td>URI identifying the subscription which has expired.</td>
</tr>
<tr>
<td>expiryDeadline</td>
<td>TimeStamp</td>
<td>1</td>
<td>Time stamp.</td>
</tr>
</tbody>
</table>

6.5 Referenced structured data types

6.5.1 Introduction

This clause defines data structures that can be referenced from data structures defined in the previous clauses, but can neither be resource representations nor notifications.

6.5.2 Type: SiteInfo

This type represents the information on an edge site.

The attributes of the SiteInfo shall follow the notations provided in Table 6.5.2-1.

Table 6.5.2-1: Attributes of SiteInfo

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>siteId</td>
<td>String</td>
<td>1</td>
<td>Identifier of an edge site. For the uniqueness of the identifier across the MEC system, UUID format [i.2] is recommended.</td>
</tr>
<tr>
<td>resourceInfo</td>
<td>ResourceInfo</td>
<td>0..1</td>
<td>Resource information in the edge site that is associated with a specific tenant.</td>
</tr>
</tbody>
</table>

6.5.3 Type: ResourceInfo

This type represents the resource information in an edge site or a MEC system that is associated with a tenant.

The attributes of the ResourceInfo shall follow the notations provided in Table 6.5.3-1.

Table 6.5.3-1: Attributes of ResourceInfo

<table>
<thead>
<tr>
<th>Attribute name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cpuQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed number of CPUs that can be used by the tenant.</td>
</tr>
<tr>
<td>cpuUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used number of CPUs by the tenant.</td>
</tr>
<tr>
<td>cpuRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining number of CPUs that can be used by the tenant.</td>
</tr>
<tr>
<td>memoryQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed amount of memory (MB) that can be used by the tenant.</td>
</tr>
<tr>
<td>memoryUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used amount of memory (MB) by the tenant.</td>
</tr>
<tr>
<td>memoryRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining amount of memory (MB) that can be used by the tenant.</td>
</tr>
<tr>
<td>diskQuota</td>
<td>Integer</td>
<td>0..1</td>
<td>Allowed amount of disk (GB) that can be used by the tenant.</td>
</tr>
<tr>
<td>diskUsed</td>
<td>Integer</td>
<td>0..1</td>
<td>Used amount of disk (GB) by the tenant.</td>
</tr>
<tr>
<td>diskRemain</td>
<td>Integer</td>
<td>0..1</td>
<td>Remaining amount of disk (GB) that can be used by the tenant.</td>
</tr>
</tbody>
</table>

7 API definitions
7.1 Introduction

This clause defines the resources and operations of the Customer Self-service Enablement (CSE) API.

7.2 Global definitions and resource structure

All resource URIs of this API shall have the following root:

```
{apiRoot}/{apiName}/{apiVersion}/
```

"ApiRoot" and "apiName" are discovered using the service registry. It includes the scheme ("https"), host and optional port, and an optional prefix string.

The API shall support HTTP over TLS as defined in clause 6.22 of ETSI GS MEC 009 [1].

The "apiVersion" shall be set to "v1" for the current version of the present document. All resource URIs in the clauses below are defined relative to the above root URI.

The content format JSON shall be supported.

The JSON format shall be signalled by the content type "application/json".

This API shall use OAuth 2.0, as defined in clause 6.16 of ETSI GS MEC 009 [1]. This OAuth 2.0 authorization procedure shall occur only on TLS-protected connections.

This API supports additional application-related error information to be provided in the HTTP response when an error occurs. See clause 6.15 of ETSI GS MEC 009 [1] for more information.

Figure 7.2-1 illustrates the resource URI structure of this API. Table 7.2-1 provides an overview of the resources defined by the present document, and the applicable HTTP methods.

![Diagram of Resource URI structure of the CSE API](image-url)

### 7.3 Resource: a list of tenants

#### 7.3.1 Description

This resource is used to represent a list of tenants.

#### 7.3.2 Resource definition

**Resource URI:** `{apiRoot}/cse/v1/tenants`

This resource shall support the resource URI variables defined in table 7.3.2-1.

#### Table 7.3.2-1: Resource URI variables for resource "a list of tenants"

<table>
<thead>
<tr>
<th>Name</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>apiRoot</td>
<td>See clause 7.2.</td>
</tr>
</tbody>
</table>

### 7.3.3 Resource methods

#### 7.3.3.1 GET

The GET method is used to retrieve information about a list of tenantInfo resource representations.
This method shall support the URI query parameters, request and response data structures, and response codes, as specified in the tables 7.3.3.1-1 and 7.3.3.1-2.

Table 7.3.3.1-1: URI query parameters supported by the GET method on this resource

<table>

</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>404 Not Found</td>
<td>It is used when a client provided a URI that cannot be mapped to a valid resource URI. In the returned ProblemDetails structure, the &quot;detail&quot; attribute should convey more information about the error.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>1</td>
<td>403 Forbidden</td>
<td>The operation is not allowed given the current status of the resource. More information shall be provided in the &quot;detail&quot; attribute of the &quot;ProblemDetails&quot; structure.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>414 URI Too Long</td>
<td>It is used to indicate that the server is refusing to process the request because the request URI is longer than the server is willing or able to process.</td>
</tr>
</tbody>
</table>

7.3.3.2 PUT

Not supported.

7.3.3.3 PATCH

Not supported.

7.3.3.4 POST

The POST method is used to create a tenant resource representation.

This method shall support the URI query parameters, request and response data structures, and response codes, as specified in the tables 7.3.3.4-1 and 7.3.3.4-2.

Table 7.3.3.4-1: URI query parameters supported by the POST method on this resource

<table>
<thead>
<tr>
<th>Name</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>n/a</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Table 7.3.3.4-2: Data structures supported by the POST request/response on this resource

<table>
<thead>
<tr>
<th>Request body</th>
<th>Data type</th>
<th>Cardinality</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Request body</td>
<td>TenantInfo</td>
<td>1</td>
<td>Message content in the request contains TenantInfo to be created.</td>
</tr>
<tr>
<td>Response body</td>
<td>TenantInfo</td>

<td>ProblemDetails</td>
<td>0..1</td>
<td>404 Not Found</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>1</td>
<td>403 Forbidden</td>
</tr>
</tbody>
</table>

Upon success, the HTTP response shall include a “Location” HTTP header that contains the resource URI of the created resource.

It is used to indicate that incorrect parameters were passed to the request. In the returned ProblemDetails structure, the "detail" attribute should convey more information about the error.

It is used when a client provided a URI that cannot be mapped to a valid resource URI. In the returned ProblemDetails structure, the "detail" attribute should convey more information about the error.

The operation is not allowed given the current status of the resource. More information shall be provided in the "detail" attribute of the "ProblemDetails" structure.

7.3.3.5 DELETE
Not supported.

7.4 Resource: individual tenant

7.4.1 Description
This resource is used to represent a tenant.

7.4.2 Resource definition

Resource URI: {apiRoot}/cse/v1/tenants/{tenantId}

This resource shall support the resource URI variables defined in table 7.4.2-1.

| Table 7.4.2-1: Resource URI variables for resource “individual tenant” |
|------------------------|--------------------------|
| Name       | Definition               |
| apiRoot    | See clause 7.2.          |
| tenantId   | Tenant identifier.       |

7.4.3 Resource methods

7.4.3.1 GET

The GET method is used to retrieve information about a tenant resource representation.

This method shall support the URI query parameters, request and response data structures, and response codes, as specified in the tables 7.4.3.1-1 and 7.4.3.1-2.
Table 7.4.3.1-1: URI query parameters supported by the GET method on this resource

</tr>
</tbody>
</table>

7.4.3.3 PATCH

Not supported.

7.4.3.4 POST

Not supported.

7.4.3.5 DELETE

The DELETE method is used to delete a tenant resource representation.

This method shall support the URI query parameters, request and response data structures, and response codes, as specified in the tables 7.4.3.5-1 and 7.4.3.5-2.

### Table 7.4.3.5-1: URI query parameters supported by the DELETE method on this resource

</tr>
</tbody>
</table>

7.9.3.2 PUT

The PUT method is used to update the existing subscription. PUT method in this case has "replace" semantics. Upon successful operation, the target resource is updated with new Data Type received within the message body of the PUT request.
This method shall support the URI query parameters, request and response data structures, and response codes, as specified in Tables 7.9.3.2-1 and 7.9.3.2-2.

Table 7.9.3.2-1: URI query parameters supported by the PUT method on this resource

</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>406 Not Acceptable</td>
<td>It is used to indicate that the server cannot provide the any of the content formats supported by the client. In the returned ProblemDetails structure, the &quot;detail&quot; attribute should convey more information about the error.</td>
</tr>
<tr>
<td></td>
<td>ProblemDetails</td>
<td>0..1</td>
<td>412 Precondition Failed</td>
<td>It is used when a condition has failed during conditional requests, e.g. when using ETags to avoid write conflicts when using PUT. In the returned ProblemDetails structure, the &quot;detail&quot; attribute should convey more information about the error.</td>
</tr>
</tbody>
</table>
ProblemDetails 0..1 422 Unprocessable Entity
It is used to indicate that the server understands the content type of the request entity and that the syntax of the request entity is correct but that the server is unable to process the contained instructions. This error condition can occur if an JSON request body is syntactically correct but semantically incorrect, for example if the target area for the request is considered too large. This error condition can also occur if the capabilities required by the request are not supported.
In the returned ProblemDetails structure, the "detail" attribute should convey more information about the error.

ProblemDetails 0..1 429 Too Many Requests
It is used when a rate limiter has triggered.
In the returned ProblemDetails structure, the "detail" attribute should convey more information about the error.

7.9.3.3 PATCH
Not supported.

7.9.3.4 POST
Not supported.

7.9.3.5 DELETE
The DELETE method is used to cancel the existing subscription. Cancellation can be made by deleting the resource that represents existing subscription.
This method shall support the URI query parameters, request and response data structures, and response codes, as specified in Tables 7.9.3.5-1 and 7.9.3.5-2.

siteList:
  type: array
  items:
    $ref: '#/components/schemas/SiteInfo'

ResourceQuotaInfo:
  type: object
  properties:
    cpuQuota:
      description: Allowed number of cpus in the MEC system that can be used by the tenant.
      type: integer
      format: int64
      example: 10
    memoryQuota:
      description: Allowed amount of memory (MB) in the MEC system that can be used by the tenant.
      type: integer
      format: int64
      example: 10
    diskQuota:
      description: Allowed amount of disk (GB) in the MEC system that can be used by the tenant.
      type: integer
      format: int64
      example: 10

SiteResourceQuotaInfo:
  type: object
  properties:
    siteId:
      description: Identifier of an edge site. For the uniqueness of the identifier across the MEC system, UUID format is recommended.
      type: string
      format: uuid
      example: 550e8400-e29b-41d4-a716-446655440000
    cpuQuota:
      description: Allowed number of CPUs in the edge site that can be used by the tenant.
      type: integer
      format: int64
      example: 10
    memoryQuota:
      description: Allowed amount of memory (MB) in the edge site that can be used by the tenant.
      type: integer
      format: int64
      example: 10
    diskQuota:
      description: Allowed amount of disk (GB) in the edge site that can be used by the tenant.
      type: integer
      format: int64
      example: 10

ResourceUsageSubscription:
  type: object
ETSI GS MEC 048 V3.0.6 (2024-03)

properties:
  subscriptionType:
    description: Shall be set to "ResourceUsageSubscription".
    type: string
    example: ResourceUsageSubscription
  callbackReference:
    description: URI exposed by the client on which to receive notifications via HTTP.
    type: string
    format: uri
    example: http://localhost:3000/api/callback
  requestTestNotification:
    description: Set to TRUE by the service consumer to request a test notification via HTTP on the callbackReference URI, as specified in ETSI GS MEC 009, clause 6.12a.
    type: boolean
    example: false
  websockNotifConfig:

Annex A (informative):
Complementary material for API utilization

To complement the definitions for each method and resource defined in the interface clauses of the present document, ETSI MEC ISG is providing for the user application lifecycle management API a supplementary description file compliant to the OpenAPI Specification [i.3].

In case of discrepancies between the supplementary description file and the related data structure definitions in the present document, the data structure definitions take precedence.

The supplementary description file, relating to the present document, is located at https://forge.etsi.org/rep/mec/gs048-cse-api.
Annex B (informative):
